PREFACE.

IN submitting to the public an Improved ENGLISH DICTIONARY, we have chosen, as the ground-work of our plan, that of the Rev. Mr. Barclay. But in doing this, we certainly cannot be accused of derogating from the merits of this gentleman, by *curtailing* his work; for, while we have made others contribute to the excellence of the present Edition, the *whole* of his Dictionary has been retained, and incorporated in *this*; in which we have endeavoured to comprise every thing useful, important, or interesting.

Should it be asked, Why publish any more Dictionaries, seeing so many are already before the world?—We admit, that several of them are possessed of great merit and utility; and yet it will not be denied by proper judges, that the general plan of these publications will still admit of improvement.

It is by no means our design to decry the labours of former Lexicographers, to point out their defects, or to endeavour to set off the merits of our *own*, by any invidious comparison with *their* works. We shall content ourselves with laying before the Reader the outlines of our plan, and submit its execution to his judgment and candour.

The improvements peculiar to the Dictionary now offered to the Public, and which we believe to be in a great measure new, are the following:

I. A PRONOUNCING DICTIONARY, of which the Title-page explains the use. We have only to observe here, that as the pronunciation of our language is too often arbitrary, (so much so, indeed, that the inhabitants of one county can scarcely understand those of another,) we have taken all possible care to adopt the best, most plain, and useful modes of speaking, without perplexing or puzzling the Reader with the almost endless and unintelligible niceties of what are pedantically called Orthoëpical Rules, or rules for right Pronunciation. The only rule that can be given in this case, of general use, is, carefully to attend to the best speakers; to the general, plain, and easy pronunciation, used in the Pulpit, in the Senate, and at the Bar: and therefore the greatest attention has been paid to the proper placing of the Accent; for upon this depends, in a great measure, the right and just pronunciation of our language. Peculiar care has also been taken, that the Initial Letters denoting each part of speech should be correct; an advantage not to be found in every Dictionary possessed of this distinction.

II. The *Synonymous* part of our Dictionary, we modestly assert to be entirely new; the use of which, both in speaking and writing, must at first view appear to every intelligent reader; and we have endeavoured to execute it without running into any whimsical notions, or fantastic affected niceties.

III. Instead of a very few Lives of Statesmen, Authors, Poets, &c. which other similar Publications, very often with little propriety, contain; we have presented our Readers with a concise, though comprehensive, Epitome of the Annals of this Country, exhibiting the characters of its several Monarchs, their most remarkable actions, and the most distinguished events of their reigns; with a brief account of the progress of the Arts and Sciences under each Monarch, as well as of the eminent personages, whether Statesmen, Men of Letters, Authors, &c. who flourished in their respective periods.

This department of our Dictionary will certainly prove of great utility to two kinds of Readers: First, to those who have not time, abilities, nor inclination, to study the History of their Country in larger volumes. Secondly, to Youth at Schools it will be found very serviceable in a double respect. By this Epitome they may be instructed in that necessary and useful part of knowledge, the History of their own Country, even imperceptibly; for it will prove rather an amusement than a task for them to turn to and find out those historical articles in the Dictionary, which would escape their attention, perhaps, in reading the best-written History, especially if imposed on them by way of task. The skilful Teacher may, in this case, find out methods of *playing* (if we may use the expression) his pupils into this valuable branch of knowledge.

Again: These Historical Anecdotes may be given as very proper and useful Exercises to Youth at Schools. Let the master prescribe to his pupils, as he judges proper, any one reign, or any part of it, to be fairly transcribed by them. Let him next, according to their capacities, set them to point out the several parts of it; the character of the monarch, whether a good or bad prince; for what actions and exploits he was remarkable; what great events happened during his reign; with other particulars, as mentioned before. This will serve as a whetstone, to sharpen and try their wit and ingenuity, and put them upon exercising their judgment concerning facts which come within the sphere of their capacities; and will by easy degrees lead them into such a knowledge of this part of Literature, as will prepare them for reading the English Historians with advantage.

The same method may with equal facility and benefit be pursued with other articles; such as Geography, in particular.—The distances of the different Places, Cities, Towns, &c. of England and Scotland, from London, have been taken with the greatest care from the best and latest authorities.

The short but clear accounts of the several RELIGIOUS SECTS, both in the JEWISH and CHRISTIAN CHURCH, are more copious and numerous than are given in the very few publications of this kind which have adopted them; and must therefore be acceptable to those Readers who desire information in this particular, but have neither time nor inclination to search for it in other books.

The Outlines of Natural History, *i. e.* of Beasts, Birds, Fishes, &c. and the Terms of Chemistry, Painting, Medicine, &c. are occasionally explained in this Work.

We shall conclude this Preface with recommending to the special attention of our Readers the following articles which are almost peculiar to this Dictionary:—

AN OUTLINE of ANCIENT and MODERN HISTORY; containing a chronological series of remarkable Events, Discoveries, and Inventions, from the Creation to the Present Time.

AN ESSAY on the CONSTITUTION, TRADE, and GOVERNMENT, of ENGLAND. This Essay was thought necessary to accompany, and in some degree to illustrate, the History of England.

A FREE INQUIRY into the ORIGIN and ANTIQUITY of LETTERS.

A short ESSAY on the ORIGIN and ANTIQUITY of the ENGLISH TONGUE.

Together with a brief List of the GRECIAN, ROMAN, and ENGLISH CLASSICS. This article will be found extremely useful to almost every class of Readers.

In a word, we submit the whole Work, both as to plan and execution, to the candid judgment of the Public. It has been carefully collated with that of Dr. Johnson; and we believe nothing material has been omitted, that required our attention. In the Geographical Department, which we have much enlarged, constant recourse has been had to the best authorities; and every material alteration, which the late revolutionary state of Europe has caused, we have carefully noted. So that we can with confidence assert, that this work will not be found inferior to any on the same plan and size now extant.

•• In this Edition, *s.* stands for Substantive;—*a.* for Adjective;—*ad.* for Adverb;—*v. a.* for Verb Active;—*v. n.* for Verb Neuter;—*part.* for Participle;—and *prep.* for Preposition.

COMPLETE AND UNIVERSAL

ENGLISH DICTIONARY.

A B A

A Is the first letter of the alphabet in all known languages, except the Ethiopic, in which it is the thirteenth. In our language it is one of the five vowels, and has three different sounds: the broad sound; as, *all*, *wall*; the open, as *father*, *rather*; the slender *a* is peculiar to the English, and is to be found in *place*, *face*, *waste*. When placed before nouns of the singular number, it denotes one, as, *a* man, i. e. *one* man; or signifies something indefinite, as, *a* man may pass this way, that is, *any* man. Before a word beginning with a vowel, we write *an*, as *an* ox, and likewise before an *h* silent, as *an* herb; but when the *h* is sounded, we then write *a*, as *a* horse. Before a participle it denotes some action not yet finished; as, I am *a* walking. Formerly it was a contraction of *at*. Sometimes it signifies *to*. It has likewise a peculiar signification, implying *each*; as, he gains a hundred pounds *a* year. In abbreviations, with a stroke over it, thus *A*, it stands for 5000 among the Romans. With Logicians, it denotes a universal affirmative proposition. Among Merchants, if set alone after a bill of exchange, it signifies *accepted*, and is used by them to distinguish their sets of accounts instead of a figure: thus, *A*, *B*, *C*. are instead of 1, 2, 3. *a*, or *aa*, is used by Physicians instead of *ana*, and signifies that the proportions of the ingredients to which it refers are to be equal. In Abbreviations, it stands likewise for *Artium*, or *Ars*, as *A. B.* artium baccalaureus, or bachelor of arts; when applied to time, for *anno*; *A. C.* ante Christum, before Christ; *A. M.* anno mundi, the year of the world; *A. D.* Anno Domini, the year of our Lord. *A*, in Music, is that note which lies between the 2d and 3d line of the treble; or upon the top, or 5th line, in the bass. *ABP.* is an abbreviation of *Archbishop*.

AB, at the beginning of the English Saxon names, is generally a contraction of *abbot*, or *abban*, and shews that they either had an abbey, or belonged to one, as *Abingdon*.

ABA'CK, *ad.* a sea-term, the situation of the sails when their surfaces are flatted against the masts by the force of the wind.

A'BACUS, *ab-a-kus*, *s.* [Lat.] a counting-table, anciently used in calculations. In Architecture, the uppermost member of a column, which serves as a sort of crowning both to the capital and column.

ABA'FT, *ad.* [*abaftan*, Sax.] is that part of the ship which is towards the stern; the same as *aft*.

ABALIENATION, *s.* [*abalienatio*, Lat.] an alienation, or estrangement from.

To *ABA'NDON*, *v. a.* [*abandonner*, Fr.] to forsake utterly; to cast off; to give up one's self wholly to any prevailing passion or vice. To *abandon*, is more applicable to things; *leave*, to persons. He was under a necessity of *abandoning* his possessions, and compelled to *leave* his friends. To *forsake*, implies in resentment or dislike; to

A B B

relinquish, quitting any claim; to *desert*, leaving meanly or treacherously. To *quit*, implies the breaking off from, and may be either voluntary or involuntary.

ABARTICULATION, *s.* [from *ab* and *articulus*, Lat.] a good construction of the bones, whereby they are apt to move easily and strongly; such as in the arms, hands, thighs, feet, &c.

To *ABA'SE*, *v. a.* [*abaisser*, Fr.] to lower, bring down, or humble.

ABA'SED, *a.* humbled; brought down. In Heraldry, it means, when the top of the vol or wings of an eagle are turned downwards towards the top of the shield.

ABA'SEMENT, *s.* the state of being brought low; the act of bringing low; depression.

To *ABA'SH*, *v. a.* [perhaps from *abaisser*, Fr.] to affect with sudden shame, or confusion; to dash. The passive is followed by the particles *at* or *of*.

To *ABA'TE*, *v. a.* [*abattre*, Fr.] to make or grow less; to diminish or decrease. These words are nearly synonymous. To *abate*, implies a decrease in action; *diminish*, a waste in substance; *decrease*, a decay in moral virtue; *lessen*, a contraction of parts.

ABATE'LEMENT, *s.* in Commerce, a term used for a prohibition of trade to all French merchants in the ports of the Levant, who will not stand to their bargains, or who refuse to pay their debts.

ABA'TEMENT, *s.* [*abatement*, Fr.] in general, signifies the lessening or diminishing something. In Heraldry, it is something added to a coat of arms, in order to lessen its true dignity, and point out some defect or stain in the character of the person who bears it. In Law, it is the rejecting a suit, for some fault discovered, either in the matter or process, upon which a plea in abatement is grounded; and if the exception to the writ or declaration is proved, the plaint abates or ceases, and the process must begin anew. Among Traders, it is the same as rebate or discount.

A'BESS, *s.* a governess of nuns.

ABBEY, *s.* [*abbatia*, Lat.] a monastery, or convent; a house of religious persons. *To bring an abbey to a grange*, a proverbial phrase, to bring a noble to nine-pence. We apply it to a spendthrift. At the dissolution of the abbeys in England, under king Henry VIII. no less than 190 were dissolved, of between 200*l.* and 35,000*l.* yearly revenue, which, at a medium, amounted to 2,853,000*l.* per annum; an immense sum in those days.

ABBOT, *s.* [*abbod*, Sax.] the chief ruler of a monastery or abbey, of the male kind. At first they were laymen, and subject to the bishop and ordinary pastors, their monasteries being built in remote and solitary places. They were by degrees allowed to have a priest of their own body, who was the *abbot*.

ABBOTSBURY, a market town in Dorsetshire, 128 miles from London. The royalty of this town belongs to the family of Strangeways, who have a noble swannery here, a curiosity that invites abundance of strangers to go and see it. Thursday is its market day.

It is covered with several muscles, from whose alternate relaxations and contractions, in respiration, digestion is forwarded, and the due motion of all the parts therein contained, promoted, both for secretion and expulsion.

TO ABDUCE, *v. a.* [*abduco*, Lat.] to draw to a different part; to withdraw one part from another.

ABDUCTOR, *s.* the muscle which draws back the several members.

ABED, *ad.* [from *a* for *at*, and *bed*] in bed.

ABER, an old British word, signifying the fall of a lesser water into a greater, as of a brook into a river, and a river into the sea; also the mouth of a river, from whence several rivers, and towns built at or near the mouth, derive their names, as *Aberconway*, *Aberdeen*, *Abergavenny*, &c.

Aberconway is 18 miles W. N. W. of Denbigh, 12 from Bangor, and 235 W. N. W. of London. Market on Friday.

ABERDEEN, the capital of Aberdeenshire, is the third city in Scotland for trade, extent, and beauty. It is formed of the old and new towns; the former, which is about a mile N. of the new, is situated on the Don, over which there is a lofty Gothic bridge of one arch, resting at each extremity on two rocks; the latter is on the Dee, over which there is a bridge of seven arches. Its university, consisting of King's College in the Old Town, and Mareschal College in the New, has produced many learned men. The manufactures are stockings, cottons, thread, &c. which they export; together with excellent salmon, oatmeal, pickled pork, &c. The inhabitants, according to the census of 1811, amount to 21,639. A strong pier, forming an excellent harbour for vessels of moderate size, was erected here some years ago, on the N. side of the harbour of New Aberdeen. This pier is 1200 feet in length, and gradually increases in thickness and height as it approaches to the sea, where the head, or rounding, is 60 feet in diameter at the base, and the perpendicular elevation is 38 feet. To the S. of the bar, they have now a depth of 17 fathoms at low water; and at the harbour mouth from 8 to 9 fathoms, where they had formerly but a few feet. Aberdeen is 120 miles N. E. of Edinburgh. The N. E. parts, extending towards the river Ythan, is called Buchan, and the Wangle, consisting of vast woodland mountains, is called Mar Forest, in which the river Dee takes its rise. There is much excellent pasture in the high parts; and the level tract, called Strathbogie, contains many well cultivated fields. It has quarries of granite, millstone, and limestone, and veins of manganese and plumbago. The principal rivers are the Dee, Don, Ythan, Deveron, and Bogie, which abound with excellent salmon. This shire contains 60,973 male and 75,930 female inhabitants, according to the return made in 1811.

James duke of York, and afterwards king, bore this office; but at present it is divided among several persons, who are styled lords commissioners of the admiralty. Under the admiral is a rear-admiral, who commands a third squadron of men of war, and carries his flag, with the arms of his country, in the mizzen-top of his ship; and a vice admiral, who commands the second squadron, and carries his flag on the ship's fore-top. *Vice-admiral*, also denotes one who is invested with the jurisdiction of an admiral, within a certain county or district upon the sea-coast; who is to aid and assist persons that are shipwrecked within his jurisdiction, and to save and secure their goods. All warrants for building and providing ships and warlike stores, are signed by them. *Court of Admiralty*, is a sovereign court held by the lord high admiral, or commissioners of the admiralty; and has cognizance in all maritime affairs, civil as well as criminal. All crimes committed on the high seas, or in great rivers, below the bridge next the sea, are cognizable in this court only, which, by statute, is obliged to try the same by judge and jury. Civil actions are determined according to civil law, because the sea is without the jurisdiction of the common law. These last-mentioned balloons were filled with inflammable air, as being considerably lighter than heated atmospheric air. According to Mr. Brydone, its height is 12,000 feet. Faujas de St. Fond states it at 10,036, and its circumference at the base is 180 miles. The lower regions of this vast mountain contain vineyards, cornfields, and pastures, with many towns, villages, and convents. The distance from Catania to its summit is about 30 miles. At the very top it is perpetually covered with snow; which is an article so necessary in this hot climate, that the bishop's revenues arise from the sale of Mount Ætna's snow; and he is said to draw 1000*l.* a year from one small portion lying on the north side of the mountain. The first eruption on record is that mentioned by Diodorus Siculus; but the second, recorded by Thucydides, was in the year 734 B. C. From this period to the year 1447 there were 18 more eruptions, and to the year 1669 were five more. In this last eruption, the lava, or fiery stream, was not less than 14 miles long, and in many places six in breadth; and in its course destroyed the habitations of 30,000 persons. A'FRICA, one of the four principal parts of the world; bounded on the N. by the Mediterranean sea; on the W. and S. by the Ocean; on the E. by the Red Sea and the Isthmus of Suez. It is in the form of a pyramid, whose base from Tangier to the Isthmus of Suez, is about 2000 miles. From the top of the pyramid, that is to say, from the Cape of Good Hope to the most northern part, is 4600 miles; and in the broadest part, that is, from Cape Verde to Cape Guard-a-fui, it is 3500. The greatest part of it is within the torrid zone, which renders the heat almost insupportable in many places. However, the coasts in general are very fruitful, the fruits excellent, and the plants extraordinary. The flesh of the animals is in general very good; and there are more wild beasts than in any other part of the world; such as lions, tigers, leopards, panthers, rhinoceroses, and elephants. There are also some animals peculiar to this country; such as the hippopotamus, or river-horse, whose teeth are so large that they serve instead of ivory, and are much better; the rhinoceros, with two horns on its nose; and the most beautiful striped zebra, which is esteemed a fine present for the greatest princes. As for the crocodiles, which were thought formerly to be peculiar to Africa, they are now met with in other places, or at least creatures so much like them, that it is hard to know the difference. Besides these, they have ostriches, camels, various sorts of monkeys, and many other animals not to be met with in Europe. There are several deserts, particularly one of a large extent, which is almost without water; and whose sands are so loose, that by means of a strong wind they will sometimes bury whole caravans at a time. However, this is not quite without inhabitants, for there are wild Arabs, and other people, who rove from place to place, partly in search of pasture, and partly to lie in wait for the rich caravans that travel from Barbary and Egypt to Negroland and Abyssinia. There are many large rivers; but the principal are the Nile and the Niger. There are very high mountains in divers parts, particularly in Abyssinia and Barbary; in which last country is Mount Atlas, that separates Barbary from Biledulgerid, and runs from E. to W. Their religion is Mahometanism and Paganism, though there are Christians in some parts, as in Abyssinia, and among the European settlements. Africa is variously divided, according to different geographers; however, the best distinguish them by the names of Egypt, Barbary, Guinea, Congo, Caffraria, Abyssinia, Nubia, and Nigritia, with the islands that surround it. In 1788, an association of gentlemen was formed for the purpose of having the interior regions of Africa explored, and it has already collected much geographical information.

their going out of Egypt to the laying the foundation of the temple in the year of the world 2992, comprehends 479 years: the fifth age of the world, from laying the foundation of Solomon's temple to the Babylonish captivity, in the year of the world 3416, contains 424 years: the sixth age of the world comprises the time from the Babylonish captivity to the Birth of Jesus Christ, which happened in the year of the world 4000, and four years before the vulgar æra, including 584 years. Another division of the ages of the world, is, the age of the law of nature, which comprehends the whole time between Adam and Moses; the age of the Jewish law, which takes in all the time from Moses to Christ; and lastly, the age of grace, or the number of years elapsed since the birth of Christ. Ancient historians have likewise divided the duration of the world into certain periods called *Ages*; the first, reaching from the creation to the deluge which happened in Greece during the reign of Oxyges, is called the obscure or uncertain *Age*; the history of mankind, during that period, being very uncertain: the second, called the fabulous or heroic *Age*, terminates at the first olympiad; where the third, or historical *Age*, commences. The poets have likewise made four divisions of the ages of the world, namely, the *golden Age*, the *silver*, the *brazen*, and the *iron Age*. There are also four degrees or periods in human life, namely, infancy, youth, manhood, and old *age*; the first extends to the 14th year, the second to the 25th year, the third to the 40th, and the fourth to the 75th year, or rather as long as a man lives.—In Law, a man at twelve years of age ought to take the oath of allegiance to the king in a leet; at fourteen, which is the age of discretion, he may marry, choose his guardian, and claim his lands held in soccage. His full age is twenty-one, in man or woman. A woman is dowable at nine years of age, may marry at twelve, and at fourteen choose her guardian. AIR, *s.* [*aër*, Lat.] in Philosophy, a thin elastic fluid, surrounding the globe of the earth, imperceptible to all our senses, except feeling. Mr. Boyle supposes it to be made up of three different kinds of corpuscles, namely, 1. Of those numberless and minute particles, which, in the form of vapours, or dry exhalations, ascend from the earth, water, minerals, vegetables, animals, &c. in short, of whatever substances are elevated by the celestial or subterraneous heat, and thence diffused into the atmosphere. 2. Of a still more subtle matter, consisting of those exceedingly minute atoms, the magnetical effluvia of the earth, with other innumerable particles sent from the bodies of the

celestial luminaries, and causing, by their impulse, the idea of light in us. 3. Of an elastic substance, which is the basis of all the other parts, and constituting the true essence of air, concerning the structure of which various hypotheses have been framed. Some have resembled these elastic particles to the springs of watches coiled up, and endeavouring to restore themselves; others to flocks of wool, which being compressed, have an elastic force; and others to slender wires, of different substances, &c. yet all springy, expansible, and compressible. fly. It is divided into 114 suras or chapters; and is universally allowed to be written with great elegance and purity of language; it is confessedly the standard of the Arabic tongue; and, as the more orthodox believe, and are taught by the book itself, is inimitable by any human pen. The Koran however abounds not only in absurdities, but contradictions; which last they vindicate, by saying, that it was three and twenty years in composing, and that the circumstances of things altering in that interval, the Deity himself repealed and altered several precepts, to suit them with the nature of things. It was originally in loose sheets, which Mahomet reported he received singly from God. This book is held in such veneration by its professors, that it is death for a Christian or a Jew to touch it; and equally fatal to a Mussulman himself, if he handle it with unwashed hands.

But this will appear more plain, if we recollect, that the three states of the kingdom were divided into *Atheling*, which included the nobility; *Alderman*, the second rank; and *Thane*, the last: till Athelstan's time, the term was used for an earl or count, which after his reign were substituted instead of it. In the time of Edgar it implied a judge or justice. But the term is now appropriated to the twenty-six persons who preside over the twenty-six wards into which the city of London is divided; out of which the lord-mayor is generally chosen by rotation. They are all qualified to act as justices of the peace at present; though formerly, only such aldermen as had been lord mayors, and the three eldest, or next to the chair, were invested with that honour. But they have not only the management of the civil, but likewise the military government of the city, are officers in its militia, and members of the artillery company. On the S. there is a harbour, called Crabbs, which only admits small vessels, and in the centre stands the town of Alderney, which consists of at least 200 houses, and 1000 inhabitants. This island is separated from France by a strait called the Race of Alderney, which is a dangerous passage in stormy weather, when the two currents meet; otherwise it is safe, and has depth of water sufficient for the largest ships. To the W. lie the range of rocks called the Caskets, where the son of Henry I. was shipwrecked on his passage to France; and here, Oct. 5, 1744, the Victory, a first-rate man of war, the finest in the world, Sir John Balchen commander, was lost. The houses are large and commodious, having terraces on their tops, and generally sky-lights in form of a dome, to let the light into the rooms. This city is the emporium of Armenia and Diarbekar; sends caravans to Bagdad and Persia; and communicates with the Persian Gulf and India by Bassora; with Egypt and Mecca by Damascus; and with Europe by Scanderoon and Latakia. Commerce is there principally carried on by barter. The chief commodities are raw or spun cottons, clumsy linens fabricated in the villages, silk stuffs manufactured in the city, copper, coarse cloths like those of Rouen, goat's hair, gall-nuts, the merchandise of India, such as shawls and muslins, and pistachio nuts, of the growth of the neighbourhood. The articles supplied by Europe are, the Languedoc cloths, cochineal, indigo, sugar, and some other groceries. The coffee of America, though prohibited, is introduced, and serves to mix with that of Moka. The number of inhabitants has been computed by some at 200,000; by others at 235,000, of whom they say, 200,000 are Turks, 30,000 Christians, and 5000 Jews.

A'LESBURY, *Aylesbury*, or *Ailsbury*, the largest and best borough-town in Buckinghamshire, as ancient as the

times of the Saxons, who took it by force in 571. In the time of William the Conqueror it was a royal manor; and he gave several yard-lands, on condition that the owner should find litter or *straw* for his *bed*, whenever he came that way. William of Alesbury held it by this charter, with this addition, that he should likewise straw the king's chamber, and provide him three eels if he came in the winter; but if in summer, besides straw for the bed, he was to provide two green geese. This he was to repeat three times a year, if the king came thither so often. It has given the title of earl to the noble family of the Bruces; Charles II. having conferred that title in 1664 on Robert Bruce, earl of Elgin in Scotland, descended from the kings of that country, to which their motto, *Fuimus*, "We have been," seems strongly to allude. It was made a town incorporate by Queen Mary, in 1553; consisting of a bailiff, ten aldermen, and twelve capital burgesses; at present its chief officer is termed a constable. It has a market on Saturday, and sends two members to parliament. The inhabitants of the town and neighbourhood have the art of rearing early ducklings, which is carried to such an extent, that 3000l. have been received for the supply of the London market in six weeks. It is 40 miles N. W. of London.

ALEXA'NDRIA, or *Scandaria*, once a magnificent, rich, and celebrated city of Egypt, built by Alexander the Great, near the most westerly branch of the Nile, soon after the overthrow of Tyre, about 333 years before the Christian era. It was long esteemed the finest city in the world after Rome. We may form some idea of its inhabitants from the account of Diodorus Siculus, who relates that it had on its rolls in his time, (44 years before the Christian era,) 300,000 freemen. The celebrated library which was founded here by Ptolemy Soter, and placed in the temple of Serapis, containing in his time 400,000 volumes, and by addition of his successors 700,000, was, in 642, destroyed by order of the Saracen khaliff, who became master of the city. The Saracen general who took it, said, in his letter to the khaliff, that he found in it 4000 palaces, 4000 baths, 40,000 Jews who paid tribute, 400 royal circi, and 12,000 gardeners, who supplied the city with all kinds of herbs in great plenty. At present it does not contain above 12,000 or 14,000 inhabitants; a mixture from different nations, as well as from various parts of the Turkish empire. The Christian Copti, Greeks, and Armenians, are very numerous here; the Europeans all pass under the name of Franks. Although Alexandria is now so much decayed, that the rubbish in some places overtops the houses, yet there are still some remains of its ancient splendour, particularly Pompey's pillar, and two obelisks of hieroglyphics. The ancient Pharos, a watch-tower, so famous in antiquity, is now turned into a castle, called Pharillon, and is still used to direct vessels into the harbour. This city was a place of great trade, before the Portuguese discovered the passage to India by the Cape of Good Hope, the commodities of the East Indies being deposited here on their way to Europe by the Red Sea. Alexandria was taken by the French under Bonaparte in 1798. Lat. 31. 12. N. lon. 29. 49. E.

ALEXA'NDRINE, *s.* [from Alexander Paris, the inventor of this metre] a kind of verse borrowed from the French, consisting among them of twelve or thirteen syllables

in alternate couplets, and among us of twelve. They were formerly very much used by our poets to clinch their verses, and generally were the last of three ending in the same rhyme; but are now discarded on account of their want of harmony, and their suspending the mind too much by their extraordinary length.

ALEXIPHARMIC, *a.* lek-se-far-mik, *a.* [from ἀλεξέω and φάρμακον, Gr.] in its primitive sense, that has the virtue of expelling poisons taken internally; and is the same as an antidote. A'LFRED the Great, son of Ethelwolf, succeeded his brother Ethelred, though that prince left several children. His virtues and distinguished bravery had been shewn in his brother's life-time, and now endeared him to his subjects. He was crowned in 871, when the Danes were in the very heart of his dominions, and all the sea-ports were filled with their fleets. After several battles, with various success, Alfred was obliged to dismiss his very attendants; and having committed his wife and children to the care of some trusty subjects, disguised himself, and lived concealed in the little island of Athelney, in Somersetshire; at length, the Danes, finding that they had no enemies to oppose them, grew negligent. This incited Alfred's friends to repair to their prince, who, resolving to be satisfied, boldly entered the Danish camp in the disguise of a musician, and even staid there several days; then returning to his friends, his troops were secretly assembled, and he came up with, attacked, and routed the Danes with incredible slaughter. Those who escaped fled to a castle, but were soon compelled to submit. Alfred agreed to let them depart, on condition that their leader, Guthrun, should embrace Christianity. This they readily complied with, and Alfred gave Guthrun the government of East-Anglia in Essex. Alfred now increased his navy, grew formidable at sea, and beat many of the Danish fleets. He fortified his kingdom with walled towns and castles, propagated the civil arts, encouraged polite learning, made many excellent laws, instituted juries, and established the plan of a civil constitution in England: and in his reign justice was so strictly observed, that we are told, bracelets of gold being hung in the highways over night, would be found safe in the morning. He was an excellent scholar; he wrote books for the instruction of his people; and was one of the greatest, wisest, and most pious princes upon earth. After a glorious reign of 28 years, he died on the 28th Oct. A. D. 900.

ALGIERS, a country of Africa, extending about 600 miles in length from E. to W. and from 40 to 170 in breadth, along the Barbary coast; has mount Atlas on the S.; Tunis on the E.; and Morocco on the W. The principal rivers are the Shellif, Mazaffran, Malve, and Zaine. The Turks, who are not above 7000 in number, have the government in their hands, and the Moors, or natives, have no share in it. It is a kind of republic, under the protection of the Grand Seignior, and is governed by a sovereign or dey, who seldom undertakes any thing of importance without the counsel of the Janizaries. The Arabs, who live in tents, are a distinct people, governed by their own laws, though the Turks interfere when they think fit. The dey is absolute in some respects, although he is elected by the Turkish soldiers, and frequently deposed and put to death by them. The revenues of the government arise from the tribute paid by the Moors and Arabs; and the prizes they take, or the piracies they commit, at sea, sometimes equal the taxes they lay upon the natives. The stems of the vines here are so large, that a man can hardly grasp them with his arms, and the bunches of grapes are a foot and a half long. The natives are strong, and of a tawny complexion; their religion is Mahometanism, and their language a dialect of the Arabic; they also use that jargon, composed of the French, Italian, and Spanish languages, called *Lingua-Franca*, which prevails along the shores of the Mediterranean. — *Algiers*, the capital of the kingdom, is so very populous, that the foreign merchants amount to at least 3000 families, and the Jews to no less than 8000: almost the whole trade passes through their hands. It stands on the sea-side over against Morocco, 380 miles W. of Tunis. Lon. 3. 48. E. lat. 36. 49. N. Perhaps, in the ruder ages of antiquity, companies of women following their husbands to battle, and sometimes fighting their enemies, may have given rise to the romantic descriptions of the Amazons by the ancients; as in later times, the Amazons of South America seem to have had a similar origin, with the wonder-stricken Spaniards. It is certain, however, that the spirit of these heroines is sometimes seen in a solitary individual: in the late Irish rebellion, Peggy Munro fought along with her brother, who commanded the rebel army at Ballinahinch.

AMAZONIA, a country in South America, bounded on the N. by Terra Firma and Guiana; on the E. by the Atlantic and Brazil; on the S. by Paraguay and Peru; and on the W. by Peru. It was first traversed in 1580, by Francisco Orellana, who, coming from Peru, sailed down the great river to the Atlantic Ocean. Observing companies

of women (or perhaps of men, for the Indians have a custom of plucking out the beard by the roots) in arms, on its banks, he called the country Amazonia, or the land of the Amazons, and gave the name of Amazon to the river, which had formerly been called Maragnon. Condamine, who afterwards went into those parts to measure a degree on the meridian, could perceive no such appearance of hostile women. The soil is very rich and fertile; the trees, fields, and plants are verdant all the year round. The rivers and lakes are infested with crocodiles, alligators, and serpents. Their banks are inhabited by different tribes of Indians, governed by petty sovereigns, distinguished from their subjects by coronets of beautiful feathers. The Spaniards have made many attempts to settle in this country; but difficulties and disasters have hitherto rendered their designs abortive. On a part of the coast, between Cape North and the mouth of the Amazon, the Portuguese indeed have made some settlements.

AME'RICA, the largest of the four grand divisions of the globe, is bounded on all sides by the ocean, and stretches, in its extensive range, through every inhabited latitude or climate in the world; and the waters on its northern extremity seem to be bound up in everlasting frost. The parts that have a vertical sun are so near the sea, or the lofty Andes, constantly covered with snow, that they experience not the excessive heats of Africa; and the complexion of the natives, or aborigines, is by no means very dark; it is generally of a reddish or copper colour, from the straits of Magellan to the borders of Hudson's Bay. This immense continent is divided into N. and S. America, which are joined by the Isthmus of Darien. Its mountains, rivers, and lakes,

are the largest in the world. America took its name from Americus Vespucius, a Florentine, who having accompanied Ojeda, a Spanish adventurer, thither, and drawing up an amusing history of his voyage, insinuated therein that he had first discovered that continent. The discovery of America was made so lately as 1491, by Christopher Columbus, a Genoese, a bold adventurer, a patriot, and a man of humanity. At that time, the authority of the pope over the whole world, was generally acknowledged throughout Europe. He had granted to the Portuguese all the lands, islands, &c. they had discovered, or might discover, to the eastward of the Azores; hence the other Europeans were deprived of the advantages of the trade to the East Indies by the Cape of Good Hope, which the Portuguese had but lately discovered. The costly articles of the East, which had heretofore come through the Red Sea and Mediterranean, and afforded to the Genoese a lucrative trade, were now brought by the Cape of Good Hope. Columbus saw, with concern, the loss his country had sustained, and concluding the earth to be round, proposed to evade the force of the pope's bull, by sailing to India by a western course. His countrymen were not better geographers than the bishop of Rome. They treated his schemes as the reveries of a mad-man; he tried other courts of Europe with similar success, till at length Isabella, queen of Spain, sold even her jewels to fit him out for the expedition.—America furnishes most of the vegetable and mineral productions to be found in the other parts of the world, together with a variety of valuable drugs and other commodities, which were unknown here before its discovery. The animals on the north are much the same all round the pole, but in the southern parts of America they are generally more diminutive and feeble; and some tribes there are, which, if ever they existed in the old world (as Europe, Asia, and Africa are called,) have there become extinct, while the most strong and savage quadrupeds seem not to have ever arrived here. Nearly the same variety of birds is found in the new world as in other parts, and some there are that are peculiar to the climate. America extends a distance of nearly 10,000 miles, from lat. 56. 0. S. to the impenetrable depths of the northern frigid zone, where it nearly extends through every degree of western longitude from London; and varies in its breadth from its narrowest part, 60 miles, at the Isthmus of Darien, to 3690, its greatest breadth, across the northern part of North America.—America may be divided into Indian Nations, United States, and European Colonies. The countries possessed by Great Britain are, Labrador, or New Britain, Upper and Lower Canada, Nova Scotia, and New Brunswick. The French have Cayenne; the Dutch, Surinam; and the Portuguese, Brasil. The Spaniards appear to have lost their possessions in North and South America, as most of their colonies have revolted, and, after a bloody struggle, have become independent Republics. The United States originally consisted of thirteen States, viz. Massachusetts, New Hampshire, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Virginia, N. and S. Carolina, and Georgia. To these have since been added, Vermont, Ohio, Indiana, Illinois, Kentucky, Tennessee, Mississippi, and Louisiana. There are, besides, the Floridas, lately ceded by Spain; and three territories, on the east of the Mississippi, viz. Alabama, Michigan, and the north-west territory; and the Missouri territory on the west. The population of the United States, in 1820, amounted to 10,405,547 souls.

The walls are high, and well fortified; and the bridge which joins the rampart, is built over the river Amstel, one of the finest pieces of architecture in those parts. Few cities have their public buildings so fine, numerous, and well kept. Here are many handsome churches, and hospitals for persons of all ages, sexes, religions, and countries. The Exchange is one of the principal ornaments of the city, and the harbour is one of the largest and finest in Europe, where a

vast number of merchant ships may always be seen; though there is a bar at its entrance, which is, however, a very great security against foreign enemies. The foundation of this town is laid upon piles, driven into a morass, and under the stadthouse alone are 13,000. The houses are brick and stone, the streets spacious and well paved, and most of them have canals, with rows of trees on each side. With regard to its magnitude, it is computed to be about half as big as London; and none of the inhabitants are idle. Before the revolution, (See HOLLAND) it was governed by a college of 30 senators, who held their places for life, and 12 burgomasters, four of whom were always sitting. It is seated at the confluence of the rivers Amstel and Wye, 80 miles N. by E. of Antwerp, 175 E. by N. of London, 240 N. by E. of Paris, 330 W. of Copenhagen, 560 N. W. of Vienna, and 870 N. Thus the rest of the Sabbath, in the *anagogical* sense, signifies the repose of everlasting happiness.

ANA'LOGY, *s.* [*ἀναλογία*, Gr.] a resemblance which one thing bears to another in some of its properties or qualities, though not in all. When we speak of the Divine Being, we are obliged to have recourse to this method of expressing

ourselves, because divine matters are not the object of our senses, and cannot be conceived any other ways than by their similitude, proportion, or connection with sensible things; so that analogy means a resemblance in kind or sort, but a difference with respect to manner. Among Geometricians, it denotes a similitude of ratios. In Medicine, it is the similitude observable among several diseases, which, accordingly, are treated in nearly the same manner. By Grammarians, it is used to signify the agreement of several words in one common mode; as, *love, loved; hate, hated*. In Rhetoric, it is a figure of speech, otherwise called Comparison.

ANALYSIS, *s.* [ἀνάλυσις, Gr.] a separation of a compound body into several parts. Among Logicians, it is a method of tracing things backwards to their source, and resolving knowledge into its original principles. With Mathematicians, it is the art of discovering the truth or falsehood of a proposition; or its possibility or impossibility; by supposing the proposition, as it stands, to be true; and examining what follows from thence, until we arrive at some evident truth, or some impossibility, of which the first proposition is a necessary consequence; and from thence establish the truth or impossibility of that proposition. In Chemistry, it is the reduction of a mixed body into its principles; which is done principally by fire. The ancient chemists admitted only three principles or elements, salt, sulphur, and mercury; to which the moderns have added water and earth; into these all bodies are resolvable by a chemical analysis, though no operation, no human art, can exhibit them pure and elementary. In Anatomy, it is the dissection of an animal. In Grammar, it is the explaining the etymology, construction, and other properties of words. In Rhetoric, it is the stripping an oration of all its flowery dress of tropes and figures, or, shewing what use the orator has made of them, to embellish and set off every thing to the best advantage.

A'RABESQUE, or **A'RABESK**, *a.* after the manner of the Arabians: generally applied to a kind of paintings or architectural ornaments, which consist in imaginary objects.

ARA'BIA, a country of Asia, on the S. W. It may be accounted a peninsula, being joined on the N. to Syria; bounded on the N. E. by the river Euphrates, which divides it from Diarbeck, or Diarbeker, the ancient Mesopotamia; on the E. by the Gulfs of Persia and Ormus; on the S. by the Indian Ocean; and on the W. by the Red Sea, which separates it from Africa. It lies between 12 and 32 degrees N. latitude, and between 35 and nearly 60 E. lon. extending 1430 miles in length, and 1200 in breadth. It is divided by Europeans into Petrea, Deserta, and Felix; or, the Stony, the Desert, and the Happy. Arabia Petrea is the smallest of the three, and towards the N. very mountainous, having few inhabitants because of its barrenness. This is the wilderness through which the children of Israel passed in

their journeying from Egypt to Canaan. In Arabia Deserta, the plains of sand are so immense, that travellers, in crossing them, are obliged to make use of the mariner's compass, as if at sea. The air is excessively hot; springs or streams are scarcely to be met with; a pestilential vapour sometimes passes along, which instantly kills those who happen to inhale it; and when the wind rises high, the desert assumes the appearance of the most rough and tempestuous sea; the sand is lifted up from its bed by the force of the winds, and driven along like waves, clouds, and rain; every thing that falls in its way is overwhelmed, and whole caravans of travellers, with their horses and camels, find one common grave in the deluge of sand. M. de Pagés observes, that in traversing the whole extent of Arabia Deserta, he saw "only 4 rabbits, 5 or 6 rats, 3 large and 7 or 8 small birds." "Here, indeed, all our ideas of deserts, as found in the poetical language of Oriental tales, fall short of the truth! A stillness, like the silence of night, the faint remains of a breeze still glowing with the fervour of the meridian sun, but sinking with his orb; around an unbounded waste, covered with dark gray sand, resembling the ashes of a furnace, and according with the raging heat of those regions; above, the vast canopy of heaven, across whose pale atmosphere no other object is seen but the reddish disk of the sun dipt in the horizon, are circumstances which conspire to impress the mind of a spectator with an unpleasing melancholy." Along the banks of the Euphrates, however, where the land is fertilized, there are great flocks of sheep, and large herds of cattle and camels. Ostriches also are found there in great numbers. The produce of Arabia Felix, which is by far the most considerable of the three provinces, is myrrh, aloes, cassia, frankincense, spikenard, manna, and other costly gums; cinnamon dates, oranges, lemons, pomegranates, figs, and other fruits; honey and wax in plenty; and immense quantities of coffee. In a country so various, and of such vast extent, we may expect the manners of the inhabitants to vary. Those in the fertile parts have long been domesticated; to them we are indebted for many valuable discoveries; they have been our preceptors in chemistry and mathematical science; they first introduced into Europe the invention of the ten arithmetical figures, and taught us their use. On the other hand, the Arabs in the Desert have no houses, but tents; they lead wandering lives, removing from place to place, partly for the sake of pasture, and partly to lie in wait for the caravans, which they often rob, as they travel over the Desert from Bussorah to Aleppo, and from Egypt to Mecca.

A'RABIC, *s.* the tongue of the Arabians, a branch of the Hebrew. *Arabic* is likewise applied to a gum, which distils from a thorny plant in Arabia.

ARTHUR, king of the Britons, according to Rapin, was born in Cornwall, 452, or 453; mounted the throne of Danmonium, 467, after his father Gorlous, at 15 years of age; was created patrician by Ambrosius, 476; elected monarch of Britain, 508; assumed the imperial purple, 528; and was mortally wounded in a battle, 542; during which Modred and he happening to meet, rushed upon one another so furiously, that nothing but death could part them. Modred was slain on the spot, and Arthur, mortally wounded, was carried to Glastonbury, where he died aged 90 years, 76 of which he spent in the exercise of arms; for though he had reigned but 34 years, yet before he came to the crown he had long commanded the British armies under Ambrosius. Arthur was undoubtedly a great general. It is a pity his actions have served for a foundation to numberless fables, though worthy of being recorded by the greatest and

most able pen. He is said to have instituted the order of the knights of the Round Table, so famous in romances. Some credible historians assert, that Henry II. being at Pembroke, and hearing a Welsh bard singing to his harp the story of Arthur, concluding with his death and burial in the church-yard of Glastonbury, between two pyramids; the king ordered inquiry to be made, and the body dug up; at the depth of 7 feet a large stone was found, on which was fixed a leaden cross, with this inscription on the inside; 'Hic jacet sepultus inclytus rex Arturius in insula Avalonia:' i. e. 'Here lieth the famous king Arthur, buried in the isle of Avalon.' Digging lower, they found the king's body in the trunk of a tree, his beautiful queen lying by him, with long flowing hair, in colour bright as gold, which, however, sunk into dust when touched. The king's bones were very large, and 10 wounds at least in his skull, all cicatrized, except that of which he is supposed to have died. This was discovered, 1189, according to Giraldus Cambrensis, who says he saw and examined them: Camden's *Britan. tit. Somersetshire*.

ARTICHOKE, *s.* a plant much like the thistle, but with large scaly heads, shaped like the cone of a pine-tree.

ARTICLE, *s.* [*articulus*, Lat.] in English there are but two articles, *a* and *the*; *a* becomes *an* before a vowel, *y* and *w* excepted, or a silent *h*. *A* is used in a vague sense, to point out one single thing of the kind, in other respects indeterminate; *the* determines what particular thing is meant. A substantive without any article to limit it, is taken in its widest sense: thus, *man*, means all mankind. *A man*, means some one or other of that kind, indefinitely; *the man*, means, definitely, that particular man who is spoken of: the former therefore is called the Indefinite, the latter the Definite Article. It is the nature of both the articles to determine or limit the thing spoken of: *a*, determines it to be one single thing of the kind, leaving it still uncertain which: *the*, determines which it is, or, if many, which they are. The first therefore can only be joined to Substantives in the singular number; the last may be also joined to plurals. There is a remarkable exception to this rule in the use of the Adjectives *few* and *many*, (the latter chiefly with the word *great* before it,) which, though joined with plural Substantives, yet admit of the singular article *a*; as, *a few men*, *a great many men*; the reason of it is manifest from the effect which the article has in these phrases; it means a small or great number collectively taken, and therefore gives the idea of a Whole, that is, of Unity. Thus likewise *a hundred*, *a thousand*, is one whole number, an aggregate of many collectively taken; and therefore still retains the Article *a*, though joined as an Adjective to a plural Substantive; as, *a hundred years*. The Definite Article, *the*, is sometimes applied to Adverbs in the Comparative and Superlative degree, and its effect is to mark the degree the more strongly, and to define it the more precisely: as, "*The more I examine it, the better I like it. I like this the least of any.*" In Commerce, a single transaction, thing, or parcel, in an account.

It is bounded on the N. by the Frozen Sea, on the E. by the Eastern Ocean, which is part of the South Sea, on the S. by the Indian Sea, and on the W. by Europe and Africa. It is of larger extent than any of the three parts in our continent; and it is generally said that the first man was created here. The arts and sciences were early cultivated here, though they are thought to come originally from Egypt; but all the considerable religions now known had their first beginning in Asia; and there are still a great number of people who maintain the ancient tenets, which, according to them, are a hundred thousand years old. They have one sort of religion in China, and another in India, whose priests are the Bramins; not to mention the Jews, Christians, and Mahometans, whose beginnings are suffi-

ently known to all the world. This was the seat of several ancient empires, or monarchies; such as that of the Assyrians, Medes, Persians, and Greeks. It is 6050 miles in length, from the Dardanel on the W. to the eastern shore of Tartary; and 5380 in breadth from the most southern part of Malacca to the most northern cape of Nova Zembla. It may be divided into ten great parts, namely, Turkey in Asia, Arabia, Persia, the Mogul's empire, with the two peninsulas of India, Thibet, China, and Corea, Great and Little Bocharia, with Charazm, Little and Great Tartary, Siberia, and the Islands. The governments of Asia are generally monarchical; and Turkey, Persia, the Mogul's empire, Thibet, and China, are subject to single monarchs; but the rest are divided among several sovereigns; so that there are reckoned seven emperors, thirty kings, besides petty princes; and the rajahs of India, which are very numerous. With regard to the extent of their religions, the Christian is but small in respect of the Mahometans, which comprehends one-third of Asia; and the Pagan is about twice as much extended as the Mahometan. The languages are so many and so various, that it is impossible to enumerate them; but the chief are the Turkish, the Grecian, the Arabic, the Chinese, the Persian, and the Old Indian. In short, every country and island has almost a distinct language. From the richness of its soil, the deliciousness of its fruit, the fragrant and balsamic quality of its plants, spices, gums, &c. the quantity, variety, beauty, and value of its gems, the fineness of its silks and cottons, and the richness of its metals, it has generally been considered as the finest quarter of the globe. Besides the animals we have in Europe, there are lions, leopards, tigers, camels, elephants, rhinoceroses, and many others. There are several great lakes; but the principal are the Caspian Sea, which is 2000 miles in circumference, and the lake Aral, which is about half as much, and has not been long known to Europeans.

So likewise the sun, with all the other planets, except Mercury and Herschel, are known by observation to move about their respective *axes*. The *axis of the earth*, during its revolution round the sun, remains always parallel to itself, and is inclined to the plane of the ecliptic, making with it an angle of about $66\frac{1}{2}$ degrees. In Conic Sections, *axis* is a right line, dividing the section into two equal parts, and cutting all its ordinates at right angles. B.

B is the second letter of most alphabets, and in ours the first consonant. It is pronounced by pressing the whole length of the lips together, and forcing them open with a strong breath. As an abbreviation, in Music, B stands for the tone above A, as Bb or bB does for B flat, or the semi-tone major above A; B also stands for bass, and B. C. for *basso continuo*, or thorough bass. As a numeral, B was used by the Greeks and Hebrews to denote 2; but among the Romans it stood for 300, and with a dash over it thus, $\overline{B}$ for 3000. The same people used B, for *Brutus*; B. F. for *bonum factum*. They likewise used B. and V. indifferently. B, in the chemical alphabet, signifies mercury. B. A. stands for bachelor of arts; B. L. for bachelor of laws; and B. D. for bachelor of divinity.

It is supposed to have been the same with the temple of Belus, which Herodotus and Strabo describe among the stupendous works in Babylon. The term is frequently used for disorder, confusion, tumult, irregular mixture.

BA'BYLON, the capital of the ancient Babylonia or Chaldaea, in Asia, is supposed to have stood in E. lon. 42. 53. N. lat. 33. 0. Semiramis is said by some, and Belus, or Nimrod, by others, to have founded this city. But by whomsoever it was founded, Nebuchadnezzar was the finisher of it; and he made it one of the wonders of the world. The most famous works in and about the city were, its walls, the temple of Belus, Nebuchadnezzar's palace, the hanging gardens, the banks of the river, the artificial lake, and the canals. The walls, which surrounded the city, were, according to Herodotus, 87 feet thick, 350 feet high, and 480 furlongs (60 miles) in circumference. They formed an exact square, each side of which was 120 furlongs (15 miles) in length; and were built of large bricks, cemented together with bitumen. The city was encompassed, without the walls, with a vast ditch, lined with bricks, and filled with water. In the whole compass of the wall were 100 gates, i. e. 25 on each side, of solid brass; and on the walls were 250 towers. The city, or town within the walls, was regularly built; for from each of the 25 gates, on every side of the square, was a straight street, extending to the corresponding gate in the opposite side; therefore the whole number of streets was 50, each about 15 miles long, and 25 of them crossing the other 25 exactly at right angles. By this intersection or crossing of the streets, the city was divided into 676

squares, of four furlongs and a half on each side, or two miles and a quarter in compass. About these squares, on every side towards the streets, stood the houses, three or four stories in height. The intermediate space within the squares and behind the houses was occupied as gardens, either for pleasure or convenience. The whole city stood in a large plain, in a very fat and deep soil; and a branch of the Euphrates, running from N. to S. divided it into two parts. That part of it which stood on the east side of the river was the old city; the other, on the west, was added by Nebuchadnezzar, both being included within the walls. The glory of this city, however, did not last long after it fell into the hands of the Persians; for Cyrus removed the seat of the empire to Shushan, and Babylon by degrees fell to utter decay. The small Turkish town of Hillah is supposed to stand on or near its site.

BABYLONIA, or *Chaldea*, a kingdom of Asia, and the most ancient in the world, being founded by Nimrod, the grandson of Ham, who is supposed by some also to have founded Nineveh, the capital of the kingdom of Assyria. The history of these kingdoms is greatly involved in obscurity. It is plain, however, from sacred and profane history, that Babylonia subsisted as a distinct kingdom from Assyria, even when the latter was in its greatest splendour. The most probable account is, that the empire of Assyria was founded by Pul, on the ruins of Damascus or Syria, in the days of Menahem king of Judah. This king left two sons, Tiglath-Pileser and Nabonassar. To the former he bequeathed the empire of Assyria, and to the latter that of Babylonia. Tiglath-Pileser resided at Nineveh, the original seat of the Assyrian empire, while Nabonassar, who was the younger brother, held his residence at Babylon. But, about 626 years before Christ, Nineveh was taken and destroyed by the Medes and Babylonians, (Nabopolassar being king of Babylon,) and the seat of the empire transferred to Babylon. Cyrus, the commander of the Median and Persian army, defeated the Babylonians, and blocked them up in the city of Babylon, which was stored with all kinds of provisions for 20 years; but he took it by stratagem. It has frequently been the object of contention between the Turks and Persians.

Two of these festivals were celebrated in the year, one in the spring, the other in autumn; both accompanied with games, spectacles, and theatrical representations; and at these times the poets contended for the prize of poetry. The initiated into the mysteries of these feasts appeared in public night and day, drunken, dancing obscenely, committing all manner of licentiousness, and running over the mountains and forests with horrible shrieks and howlings, crying out, *Io Bacche*. In Rome they occasioned such shocking disorders, that the senate suppressed them.

The translation of the sacred volume was begun very early in this kingdom, and some part of it was done even by king Alfred. Adelmus translated the Psalms into Saxon in 709; other parts were done by Edfrid, or Ecbert, in 730; the whole by Bede in 731. Trevisa published the whole in English in 1357. Tindal's was brought hither in 1534; revised and altered in 1538; published with a preface of Cranmer's, in 1549. In 1551, another translation was published, which being revised by several bishops, was printed with their alterations in 1560. In 1613, a new translation was published by authority, which is that in present use.

BOILING, *s.* in Physics, the particles of fuel passing the pores of the vessel, mix with the liquid, and meeting with a resistance there sufficient to destroy their motion, they communicate it to the water; hence arises a small intestine motion in the particles of that fluid; but the first cause still continuing, that motion is increased till the agitation of the water becomes sensible; but now the particles of fire, continually striking on those at the lowest surface of the water, will impel them, both by its impulse and their own rarefaction, upwards, during which the particles at the upper surface must, by their own specific gravity, be descending towards the bottom; which will easily account for the surface of water being sooner hot than at the bottom, and a person's being able to move a vessel of boiling water by putting his hand on the bottom, without receiving any hurt. The fire thus diminishing the specific gravity of water, so as to make it mount not only in water, but likewise air, we hence are enabled to account for the steam or smoke. The particles of air dilated and expanded thus by heat, moving upwards, will meet and coalesce in their ascent, by which means great quantities of water rise and fall alternately, or, in other words, the water will boil; but the heat continuing, and the rarefaction increasing, the water will now be too much for the vessel to contain, and will consequently swell over its sides, which the vulgar call *boiling over*. It must however be added, that when water boils, it cannot be rendered hotter by any degree of fire whatever.

The inland country is very mountainous; but towards the sea, low and marshy, occasioned by the great rains that fall eight months in the year. It produces aromatic herbs, oranges, lemons, mangoes, pines, palms, &c. in great abundance, excellent mastic, and other gums, wax, rice, cassia, coffee, honey, cotton, camphire, frankincense, musk, aloes, agaric, brazil-wood, sapan, pepper, cinnamon, and other spices; diamonds and gold dust are found in their rivers and sands. The animals are elephants, buffaloes, oxen, horses, tigers, leopards, bears, monkeys, deer, wild boars, goats, parrots, paroquets, together with a great variety of other beautiful birds; besides several animals unknown to the Europeans. Pepper is peculiar to the countries about Bangaar. Sambass, another part of this island, produces gold pearls, and bees-wax, which last is used instead of money. The people, in general, are very swarthy, but not quite black, and they go almost naked. There are Mohammedans on the sea-coast; but all the rest are Gentoos or Pagans. The Portuguese endeavoured to establish themselves here: but differences arising between them and the natives, they were all driven away, or murdered; however, the English have still a liberty of trading to the island, and in 1813 obtained possession of Sambass. The sea-coast is usually overflowed half of the year; and when the waters go off, the earth is covered with ooze and mud; for which reason some of the houses are built on floats, and others on high pillars, or posts. The capital town is of the same name, and large and populous, with a good harbour, and seated on the N. W. side of the island, 42 miles S. W. of Bacasa, lon. 112. 44. E. lat. 4. 55. N.

seasons divide the year. During our summer months it has intense heat, violent winds, deluges of rain, and dreadful tempests of thunder and lightning; but during the winter of Europe, the ardent heat subsides, the air becomes soft and mild, and the weather serene. It has a great variety of animal and vegetable productions. The ground is cultivated with hoes; the plough being unknown. The country is said to abound in flocks, millet, and cotton, which last the inhabitants manufacture and wear. The religion is Mohammedism; the government a sort of elective monarchy. In manners the people are courteous and humane. *Bornou*, the capital of this empire, is situated in a flat country, on the banks of a small river. It is of greater extent than Tripoli; but the houses, though neat, are so irregularly placed, that they can hardly be said to form streets. The mosques are constructed of brick and earth, and there are schools in which the Koran is taught, as in the principal towns of Barbary. It is 650 miles S. E. of Mourzouk, in lat. 19. 45. N. lon. 23. 5. E.

The whole number of boroughs amounts to 149. *Royal boroughs*, are corporations in Scotland, made for the advantage of trade, having commissioners to represent them in parliament. *Head-borough*, the president or chairman of a hundred, chosen to speak, or transact affairs in their name. BORROWDALE, a village in the S. E. part of Cumberland, bordering on Westmoreland, in a romantic valley among the Derwentwater fells. These fells or hills are some of the loftiest in England, and it is in one of them the black lead, or wad, is found, wherewith almost all the world is supplied; the mines are opened only once in seven years, and when a sufficient quantity of this valuable and singular mineral is taken out, they are carefully closed again. In travelling among these mountains, the idea that presents itself to the astonished spectator, is that of the earth having been in a state of violent agitation and uproar, like the ocean in a storm; the hills appear like waves rising one behind another; and were it not for the abrupt and sudden

scarps, and the immense masses of rugged rocks that give the idea of fixedness and stability, the bewildered fancy might be so lost as to imagine they were in a state of undulation, and ready to mingle with each other. The beautiful vale of Borrowdale is watered by the clearest brooks, which, precipitated from the hills, and forming many beautiful waterfalls, meet together in the dale, and forming one large stream, pass out of the dale under the name of Borrowdale Beck, when its waters spread out into an extensive lake, containing several beautiful islands. This lake is called Derwent-water, or Keswick Lake. Borrowdale is 6 miles S. of Keswick; in passing from which, the traveller has the lake on his right hand, and stupendous rocky precipices on his left: huge stones, or rugged masses of rock, which have tumbled from above, lie scattered along his way. As he approaches the dale, he sees the ledges of the rocks covered with herbage, shrubs, and trees; villages and farms arise upon his view; the larger cattle are seen feeding in the lower grounds, and the sheep in large flocks upon the mountains.

BRA'CHMANS, BRAHMINS, or BRAMINS, a sect of Indian philosophers, known to the ancient Greeks by the name of Gymnosophists. The ancient Brachmans lived upon herbs and pulse, and abstained from every thing that had life in it. They lived in solitude, without matrimony, and without property, earnestly wishing for death, and considering life only as a burden. The modern *Brachmans* are one of the casts or tribes of the Banians; they are their priests, and perform their office of praying and reading the law, with several mimical gestures, and a kind of quavering voice. They believe that in the beginning nothing but God and water existed; and that the Supreme Being, desirous to create the world, caused the leaf of a tree, in the shape of a child playing with its great toe in its mouth, to float on the water. From its navel there issued out a flower, whence *Brama* drew his original, who was entrusted by God with the creation of the world, and presides over it with an absolute sway. They make no distinction between the souls of men and brutes; but say the dignity of the human soul consists in being placed in a better body, and having more room to display its faculties. They allow of rewards and punishments hereafter; and have so great a veneration for cows, that they look upon themselves as blessed, if they can but die with the tail of one of them in their hand. They are skilful arithmeticians, and calculate, with

great exactness, the eclipses of the sun and moon. They are remarkable for their religious austerities: one of them has been known to make a vow to wear about his neck a heavy collar of iron for a considerable time; another to chain himself by the foot to a tree, with a firm resolution to die in that place; and another to walk in wooden shoes stuck full of nails on the inside. Their divine worship consists chiefly of processions made in honour of their deities. They have a college at Benaras, a city situated on the Ganges.

S. lat. and between 35 and 53 degrees W. lon. extending from the river of Amazons to that of La Plata, a length of coast of above 2100 miles, and varying in breadth from 90 to 1000 miles. It is bounded on the W. by Paraguay and Amazonia; its other boundaries are formed by the great Atlantic Ocean. It was discovered in 1500, by Alvarez Cabral, a Portuguese, who was forced upon it by a tempest; and with only a slight interruption, the kings of Portugal have continued masters of it ever since. The air of this country, though within the torrid zone, is pretty temperate and wholesome; insomuch that people live to a great age. The waters in general are very good, and the soil is fertile and excellent; more sugar comes from thence than all other parts of the world; it also produces tobacco, Indian corn, several sorts of fruit, and medicinal drugs; besides the red wood from which the country seems to have had its name. (See the preceding article.) Within the country are gold, and

several sorts of precious stones. The cattle, carried over from Europe, increase prodigiously, so that there is no want of provisions. The Portuguese chiefly inhabit the sea-coast, for they have not penetrated far into the country. The inland parts are full of people of different languages; but they all agree in wearing no sort of clothes. They are of a copper colour, with long coarse black hair on their heads, but without any on the other parts of their bodies, like the rest of the Americans. They are strong, lively, and gay; and, as they are subject to few diseases, live a long time. They love to adorn themselves with feathers, and they are very fond of feasts, at which they dance and skip about immoderately. They have no temples, nor any other sign of religion; and they make no manner of scruple to marry their nearest relations. They have huts made of the branches of trees, and covered with palm-tree leaves. Their furniture consists chiefly in their hammocks, and dishes, or cups, made of calabashes, painted without of a red colour, and black within; their knives are made of a sort of stone and split canes; and they have likewise baskets of different sizes, chiefly made of palm-tree leaves. Their arms are only bows, arrows, and wooden clubs. When they travel, they fasten their hammocks between two trees, and sleep all night therein. The Portuguese divide Brazil into fifteen governments or captainries; eight of which belong to the king of Portugal, and the rest to great men, who have colonized them at their own expense. The Royal Family of Portugal removed from Lisbon, in 1807, to this country, and continued here till 1821. It has long given the title of prince to the heir apparent to the crown of Portugal; and in 1815 it was raised to the rank of a kingdom. In 1821, the inhabitants extorted a free constitution from their rulers. St. Sebastian, the capital, is in lat. 22. 54. S. lon. 42. 44. W.

BRISTOL, a city and sea-port of England, partly in Gloucestershire, and partly in Somersetshire, to which last it was accounted to belong, before it formed a separate jurisdiction. In wealth, trade, and population, (its inhabitants amounting to 76,433, in 1811,) it has long been reckoned the second in England; the custom house receipts for Liverpool, however, have of late years considerably exceeded those of Bristol. It is seated at the confluence of the Avon and Frome, about ten miles from the place where the Avon discharges itself into the Severn. Ships of considerable burden come up to the quays; and, by a late improvement, the Avon is completely dammed across, just below the city, and its bed converted into a vast bason, above two miles long, which is entered by gates and locks, and capable of containing a thousand vessels always afloat. A new channel has been cut for the river, which is navigable for small craft to Bath, and over it are two iron bridges of a single arch each. The city has 18 churches, besides the college, or cathedral, which was formerly the church of St. Augustine's monastery. It has also a guildhall, a council-house, an exchange, a custom-house, a theatre, an assembly-room, and several other public buildings, besides hospitals, schools, and numerous charitable foundations. Bristol is a county of itself, sends two members to parliament, and is governed by a mayor, and has two annual assizes, of which that in the spring is held by its own recorder. Its trade is so extensive, that it sends about 2000 ships every year to different parts of the world; the sugar-refining and tanning of leather are among its principal manufactures; and it has several glass houses and brass founderies, which are abundantly supplied with coals from the neighbouring pits at Kingswood, as well as from the Mendip hills. The old streets are mostly narrow, but those of recent date are open and well built, and the shops with which they are lined, exhibit a display of wealth and elegance threatening to vie with the metropolis. It has also some large and elegant squares; and the new buildings rise in range one above the other to the summit of the hill against which the Gloucestershire side of the city is built. The city walls have been long since demolished. The markets, held on Wednesdays, Fridays, and Saturdays, are well supplied. The prospects in the vicinity of Bristol are delightful; and the banks of the Avon, with lofty rocks, through which it finds a passage to the sea, covered with herbage and trees, and presenting dizzy heights and fearful precipices, are sublimely picturesque. About a mile to the W. of the city, on the side of the Avon, is the celebrated hot well, the water of which issues from St. Vincent's Rock, and has obtained a high and deserved reputation in consumptive cases, provided it be resorted to before the

disorder has reached its last stage. A new and elegant hot-well-house, built in the Doric style, with a pump-room, reading-room, hot and cold baths, and other conveniences for visitors, was opened in 1822; and a fine road, cut by the foot of the rock, and rising up a most delightful slope to the downs above, is now making. In St. Vincent's Rock are found those native crystals so well known under the name of Bristol stones, or Bristol diamonds. At the top of the rock is the beautiful village of Clifton, which has been much enlarged of late years by elegant buildings, squares, crescents, terraces, &c. as it is much resorted to, on account of the salubrity of its air and the fine prospects it affords in every direction. Bristol is 12 miles W. N. W. of Bath, and 116 W. of London.

BUE'NOS AYRES, (so called on account of the salubrity of the air) one of the most considerable sea-ports of South America, and capital of the province of Paraguay, or La Plata, and formerly the seat of a viceroy. It stands on a peninsula on the south side of the river La Plata, 220 miles within its mouth, (where the river is 21 miles broad) in a country truly paradisiacal, being overspread with a beautiful verdure as far as the eye can reach. It contains upwards of 40,000 inhabitants; and provisions are in the greatest abundance. The streets are straight and broad, and the buildings tolerably regular. The productions of the country are indigo, tobacco, vincenta wool, cotton, tiger-skins, seal-skins, copers, figs, dried tongues, dried beef, hams, saffron, cochineal, cocoa, hemp, hair, wheat, gums, drugs, gold, silver, and precious stones, besides tallow and hides, which may be considered the great staple. On the 28th of June, 1806, this town and its dependences surrendered to an English squadron under Sir Home Popham, seconded by about 1500 land forces commanded by major-general Beresford; and treasure to the amount of more than a million of dollars fell into the hands of the victors, and was conveyed to England. But on the 12th of August following, the Spaniards retook the place, and made the British army prisoners of war, and the captured property (not removed) to the amount of more than three millions of dollars, fell again into their hands. On the 5th of July, 1807, this place was again attacked by the British army under general Whitelock; but the consequences were disastrous, and the total evacuation of South America was agreed to on the day following. In 1810, a revolution took place here; the viceroy was deposed, and a republic set up, which has maintained its independence against the attacks of the royalists, with various success; but it has not yet been acknowledged by the king of Spain. C

C is the third letter in the English alphabet, supposed by some to have been borrowed from the Hebrew, by others from the Grecian. It is sounded by pressing

the breath between the tongue, raised to the roof of the mouth near the palate, and the lips open. Before the vowels *a*, *o*, *u*, and all consonants, it is pronounced hard, though somewhat softer than the *k*, as in *cage*, *cat*, *cut*; but before *e*, *i*, and *y*, it has a sound like the *s*, but somewhat more sharp, as in *cit*, *cell*, *cyder*; before an *h* it has a peculiar sound, between the hardness of the *k* and the softness of the *s*, as in *chain*, *cheese*; but in words derived from the French, it is sounded like an *s* before *h*, as in *chaise*, *chicane*, which are pronounced *shaize*, *shicane*. It has been customary to add a *k* to it, when it comes at the end of words as in *logick*; but moderns seem now to have dropped the *k* as useless, writing *logic*, *critic*, *music*, &c. which is certainly to be commended, not only as being more agreeable to the etymology of words derived from the Latin, but likewise confirmed by the practice of the Anglo-Saxons, from whom we have borrowed the best part of our language. Used as a figure, it stands for 100, and when double CC, 200. When placed before a name, it signifies *Cain*, *Cesar*, &c. With Roman Lawyers, it signified to condemn, from *condemno*. See A. When doubled, it signifies *consuls*. In Commerce, it is used by merchants to mark their books. In Music, it denotes the highest part of a thorough bass.

The houses, which are variously built, some of brick, others with mud, and a greater number with bamboos and mats, make a motley appearance: the quarter inhabited by the English is however entirely composed of brick buildings on a large and elegant scale. The inhabitants are very hospitable; but the mixture of European and Asiatic manners forms a diversified and curious scene. Here the governor-general and council of Bengal reside, who have a control over the presidencies of Madras, Bengal, and Bencoolen. The situation of this city is not happily chosen; for it has extensive muddy lakes and a vast forest close by it, from which, in so hot a climate, unwholesome vapours must arise. CALENDAR, or KALENDAR, *s.* [*calendarium*, Lat.] a table containing the days, months, festivals, &c. happening in the year. The Roman calendar from which ours is borrowed, was composed by Romulus, who made the year consist of no more than ten months, or 304 days; Numa Pompilius corrected his error, by making it consist of twelve lunar months of thirty and twenty-nine days alternately, which made 354 days; but being fond of an odd number, he added one day more, which made it 355; and that the civil year might equal the sun's motion, he added a month every second year. Julius Cesar, as a farther improvement, made the year consist of 365 days, and left the six hours to form a day at the end of every fourth year, which was added to the month of February. This calendar was called the Julian; or the Old Style, in opposition to the New Style introduced by Gregory XIII. who finding the Julian gone too forward, cut off ten days from the calendar; and, to remedy this defect for the future, left out one bissextile day every 100 years, making every fourth hundred a leap-year. By act of parliament, to remedy the inconveniences arising from the difference of style, this kingdom adopted the Gregorian, or new style, by leaving out eleven days of the month of September in the year 1752. When the French revolutionists set up their democratic republic, they also changed their calendar, according to which the year commenced on the 22d of September, 1792, and in succeeding years at midnight, the beginning of that day in which fell the true autumnal equinox for the observatory of Paris. The year was divided into 12 equal months of 30 days each, with five supplementary added, to complete the 365 days of the ordinary year. Each month was divided into three decades of 10 days each; distinguished by 1st, 2d, and 3d, decade; and the months and days had new names, taken from the circumstances of the seasons. This calendar was abolished by the emperor Napoleon, and the old one resumed on the 1st of January, 1806.

The Calvinists are great advocates for the absoluteness of God's decrees, without any regard to the merit or demerit of man; and believe that God foreknew a determinate number, in whom he intended to manifest His glory; and having predestinated them to be holy, he gives them an irresistible grace, which makes it impossible for them to be otherwise.

In England, the most considerable are: 1. *The Duke of Bridgewater's*, the first grand work of the kind in the kingdom, begun in 1758. It commences at Worsely Mill, 7 miles from Manchester, where, at the foot of a mountain, composed of coal, a bason is cut, which serves as a reservoir to the navigation. The canal runs through a hill from this bason, nearly three quarters of a mile, to the duke's coal works. At Barton Bridge, 3 miles from the bason, is an aqueduct, which for upwards of 200 yards, conveys the canal across a valley and the river Irwell. It has three arches over the river, of which the central arch is 63 feet wide and 38 high, so that the largest barges can pass under it with their masts and sails standing. At Longford bridge the canal turns to the right, and crossing the river Mersey, passes near Altringham, Dunham, Grapenhall, and Kaulton, into the tideway of the Mersey, at Runcorn Gap, where barges can pass into the canal from Liverpool at low water. This navigation, which is 29 miles in length, with a fall of 95 feet, was completed in five years, under the direction of Mr. Brindley, and has since been extended 7 miles farther, from Worsely to Leigh.—2. *The Grand Trunk, or Staffordshire Canal*, began in 1766, also under Mr. Brindley's direction, forms a communication between the rivers Mersey and Trent, and consequently between the Irish Sea and the German Ocean. It is 92 miles in length, from the duke of Bridgewater's canal, at Preston-on-the-Hill, in Cheshire, to

Wildon, in Derbyshire, where it communicates with the Trent. This canal is carried over the river Dove, in an aqueduct of 23 arches, and over the Trent by an aqueduct of 6 arches. At Preston-on-the-Hill, it passes under ground 1241 yards; at Barton, and in the neighbourhood, it has two subterraneous passages, one of 560, the other of 350 yards; and at Harecastle Hill, in Staffordshire, it is conveyed under-ground 2880 yards.—3. *The Chester Canal*, which branches from the Grand Trunk at Middlewich, in Cheshire, runs to Nantwich and Chester, and unites the river Dee with the sea. 4. *The Wolverhampton Canal*, which begins in the Trent, above Rudgeley, waters Wolverhampton, in Staffordshire, communicates with the Dudley and Worcester canal, and ends in the Severn, near Kidderminster.—5. *The Lancaster Canal*, which runs through Westmoreland and Lancaster, uniting the river Kent to the Leeds canal, and is 72 miles in length from Kendal to Ecclestone.—6. *The Liverpool Canal*, which passing from Liverpool to Leeds, unites the Mersey to the river Air, and communicates with the Humber.—7. *The Sanky Canal*, in Lancashire, communicating with the Mersey below Warrington.—8. *The Wigan Canal*, running from Wigan, in Lancashire, and forming—9. *the Leeds Canal*, between Ecclestone and Ormskirk.—10. *The Selby Canal*, which unites the Leeds canal to the Humber, near Selby, in Yorkshire.—11. *The Coventry Canal*, commencing near Lichfield, and ending at Coventry, joining the Trent in its course.—12. *The Birmingham and Fazeley Canal*, branching from the Warwick and Birmingham canal, near Birmingham, and after a course of nearly 24 miles, uniting with the Coventry canal.—13. *The Oxford Canal*, branching from the Coventry canal, and joining the Thames above Oxford.—14. *The Grand Junction*, which commences at Braunston, in Northamptonshire, where it joins the Oxford canal, passes by Daventry to Stoney Stratford, in Buckinghamshire, thence on the confines of Bedfordshire, W. of Leighton Buzzard, to Tring, Berkhamstead, and Rickmansworth, in Hertfordshire, and through Middlesex, by Uxbridge, to Brentford, where it enters the Thames. It is upwards of 90 miles in length, and by joining several other canals in the centre of the country, forms a communication between the Thames, Severn, Mersey, and Trent, and furnishes an inland navigation to the four principal sea-ports, London, Bristol, Liverpool, and Hull.—15. *The Thames and Severn Canal*, uniting the Thames with the Severn; and, beginning at Lechlade, runs through Gloucestershire and a part of Wiltshire, and joins the Severn near Saul, between Berkeley and Gloucester.—16. *The Paddington Canal*, which branches from the Grand Junction, near Crawford, in Middlesex, and takes a circuit between Greenford and Harrow to Paddington, a village on the borders of the metropolis.—17. *The Regent's Canal*, branching from the Paddington canal, near its head, and passing round the N. and E. of London, joins the Thames at Limehouse. This canal, which was opened on the 1st of August, 1820, passes through two tunnels, cut under roads, rivers, houses, and fields, one at Maida Hill, near Paddington, the other, which is the longest, at Islington. Besides these, England has several other canals; as the *Andover*, in Hampshire; the *Basingstoke*, in Hampshire and Surrey; the *Chesterfield*, in Derbyshire, Yorkshire, and Nottinghamshire; the *Cromford*, in Derbyshire; the *Dudley and Stourbridge*, in Staffordshire; the *Kennett and Avon*, in Wiltshire; the *Grand Surrey*, in Surrey; the *Croydon and Rotherhithe*, in Surrey and Kent; the *Worcester*, in Worcestershire and Staffordshire; the *Wilts and Berks*, in the two counties from which it is named; and the *Weighton*, in Yorkshire. In the course of this navigation, vessels are raised to the height of 141 feet above the level of the sea, and passing

afterwards upon the summit of the country for 18 miles, they then descend into the river Clyde, and thence have free access to the Atlantic Ocean. This canal is carried over 36 rivers and rivulets, and two great roads, by 38 aqueducts of hewn stone, presenting in its course many strikingly romantic scenes.

2. *The Caledonian Canal*, forming a junction between Loch Linne and Moray Frith, a distance of 66 miles, including the lochs Lochy, Oich, and Ness, which are taken into its line. In Ireland, are many canals and nodes of inland navigation by the rivers and lakes; the most remarkable are, 1. *The Royal Canal*, on the north side of the city of Dublin, which proceeds from the Liffey, and communicates with the Shannon, above Lanesborough, having a lateral cut to the Boyne navigation. 2. *The Grand Canal*, on the south side of the city, extending upwards of 40 miles to the Barrow navigation, and having a branch, in a westerly direction to the Shannon, below Bannagher.

The houses are remarkably neat, but consist of only one story, and they have no windows to the street. The covered market-places are full of shops. They have manufactures of their own, especially of silk-stuffs. The number of inhabitants is computed at 1,500,000, many of whom reside in barks, which form a kind of floating city; they touch one another, and are so ranged as to form streets. Each bark lodges a family, which has no other dwelling. At break of day, all the people who inhabit them depart to fish, or to cultivate their rice. It is 1180 miles S. by W. of Pekin. Lat. 23. 7. CANUTE, or *C'nute*, upon Edmund's death, became master of the whole kingdom, and was proclaimed king in 1017; and all the lords, both English and Danes, swore allegiance to him. After his coronation, he divided England into four parts; Mercia, Northumberland, East Anglia, and Wessex. Over the three former he appointed dukes or earls, and the last he governed himself. To the end that justice might be impartially administered, he declared, that for the future there should be no distinction made between the English and Danes. He sent Edmund's two sons into Denmark, under pretence of travelling; but a worse design was supposed to be at the bottom of it. However, the king of Hungary, at whose court they were, after having first been in Sweden, took care of their education, and gave one of his daughters in marriage to Edmund, the eldest, who died soon after; and to Edward he gave his sister-in-law, Agatha, daughter of the emperor Henry II. by whom he had five children, Edgar Atheling, Margaret, and Christian, and two died in Hungary. He built a stately church over the grave of St. Edmund, the East-Anglian king, who was killed by the Danes, and very much enlarged the town of St. Edmundsbury. In 1031, he took a journey to Rome, where he made large presents to the churches, and confirmed all his predecessors had done, both for the church of Rome and the English college. There is an instance of his piety and good sense transmitted to us, which is, that as he was walking one day by the sea-side, at Southampton, and his flatterers were extolling him to the skies, and even comparing him with God himself; he, to convince them of their folly and impiety, caused a chair to be brought to him, and seating himself where the tide was about to flow, he turned himself to the sea, and said, "O sea, thou art under my jurisdiction, and the land where I sit is mine; I command thee to come no farther, nor to presume to wet thy sovereign's feet." But the tide coming on as usual, he, from thence, took occasion to let his base flatterers know, that none but the King of Heaven, whom the sea and land obey, deserved the titles they impiously bestowed on him. After which, it is said, he would never wear his crown, but caused it to be put on the head of a crucifix at Winchester. Canute died in the 19th year of his reign, in the year 1036. He left three sons: Sweyn, who had Norway; Harold, England; and Hardicanute, Denmark. Gunilda, his daughter, was married to the emperor Henry IV.

CAPE OF GOOD HOPE, the most southerly point of the continent of Africa, and very rocky, lies in 34. 23. S. lat. and 18. 23. E. lon. It was discovered by the Portuguese, in 1493, and had its name from the hope they entertained of finding beyond it a passage to India; which hope was fulfilled in 1497. The Dutch first visited it in 1600; and in 1650 they made a settlement, which soon increased to an extensive territory, including a great part of the country of the Hottentots. Upwards of 30 miles to the N. of it is the Cape Town, which is neat and well built, rising in the midst of a desert, encompassed by black and dreary mountains. The public offices built by the Dutch East-India company are situated next the water, and the private buildings lie beyond them on a gentle ascent. The streets are broad and regular, intersecting each other at right angles; and the houses are mostly built of stone, cemented together with a glutinous kind of earth, which serves as mortar, and afterwards neatly plastered and white-washed. Here are two churches; one large, plain, and un-

adorned, for the Calvinists, the prevailing sect; and a smaller one for the Lutherans. The only landing-place is at the E. end of the town, where is a wooden quay, running some paces into the sea, with several cranes on it, for the convenience of loading and unloading the scoots that come alongside. Close to this quay, on the left hand, stands the castle and principal fortress; a strong extensive work, having excellent accommodations for the troops, and for many of the civil officers belonging to the colony. This fort covers and defends the East part of the town and harbour, as Amsterdam Fort does the West part. Some smaller detached fortifications extend along the coast both to the E. and W. and make a landing, hazardous and difficult. The ground behind the town gradually rises on all sides towards the mountains, which bear the various names of Table Mountain, which is the highest; the Sugar Loaf, so named from its form; the Lion's Head; Charles Mount; and James Mount, or the Lion's Rump. The view from the Table Mountain is extensive and picturesque; and all along the valleys are scattered a number of fine plantations. The cultivated country beyond the mountains is of great extent, and forms six different establishments. The soil is uncommonly productive, and the climate benign and favourable to vegetation. The spring commences here in October. Provisions are very reasonable at the Cape, and fish, and game brought from the country, are in great abundance.—In September, 1795, this fine colony surrendered to an English squadron, under Sir G. K. Elphinstone. At the peace of Amiens, in 1802, it was restored to the Dutch; but on the 10th of January, 1806, it was again taken by an English force under admiral Sir Home Popham, and general Sir David Baird; and was confirmed to Great Britain at the peace of 1814.

They were discovered by Antonio Noel, a Genoese, in the service of Portugal, in 1446. The natives are of a middle stature, ugly, and almost perfectly black: their hair is woolly and frizzled, and their lips thick. A company of merchants, belonging to Lisbon, have the exclusive right of trading to these islands; and they keep an agent here for that purpose, who perfectly tyrannizes over the inhabitants, and sells the wretched commodities carried from Portugal at exorbitant prices. CEYLON, or in Arabic, *Sarendib*, a large and mountainous island of Asia, in the Indian Ocean, E. of Cape Comorin, on the coast of Coromandel, about 270 miles in length, and 140 in its greatest breadth. It produces large quantities of cinnamon, and its pepper is of superior quality. Here is a great variety of wood for all uses; but the most remarkable tree in the island is the tallipot, of which, one of the leaves will cover 10 men, and protect them from rain. It abounds in corn, rice, elephants, buffaloes, goats, hogs, deer, hares, dogs, jackals, monkeys, tigers, and bears. In some places are mines, whence are got rubies, sapphires, topazes, and other stones of less value. The Dutch were in possession of all the coast of this fertile island, and to the distance of ten or twelve leagues up the country; but the whole island is now in the possession of the British, who have introduced Christianity on an extensive scale. The inhabitants consist of four distinct nations, *viz.* 1. The Vedas, or indiginous natives, a hardy race, in the north, dwelling in the woods, or on the mountains, in the rudest state of social life; and entertaining some indistinct notions of the Brahminical doctrines. 2. W. coast, they appear to be instructed in all the arts of civil life, and are worshippers of Budha. 3. The Hindoos, from the opposite continent, spread along the E. coast, and over the N. end of the island. 4. The Moors, or descendants of the Arabs, who formerly conquered many seaports and islands in India: they are dispersed in every part, but least among the Hindoos, and are Mohammedans. The principal places are Columbo and Trincomalee. See CANDY.

CHARLES, (*Stuart*) I. born November 19, 1600, was proclaimed king on the death of James I. March 27, 1625; and on the May following, his marriage with Henrietta Maria of France was solemnized by proxy at Paris. The new queen arrived in England, and the marriage was consummated at Canterbury, on the 10th of June. The king, on the 10th of May, granted a pardon to 20 Romish priests, who were condemned to die. On the 18th of June, the parliament met at Westminster, when the king asked money for the recovery of the Palatinate. After some complaints and debates about grievances, the commons gave the king two subsidies; but at the same time, both houses joined in a petition against Recusants, setting forth the great dangers from the increase of popery, the cause of this increase, and the remedies for preventing this evil for the future. To which the king gave an answer very much to the satisfaction of the parliament, if his actions had been agreeable to it. King James having promised to send some ships to the French king, which, it was pretended at least, were to serve against the Genoese, or some of the allies of Spain, admiral Pennington was sent to Dieppe with the Vanguard man of war, and 7 stout merchant ships. It soon appeared, that the French king designed to make use of them against his protestant subjects in Rochelle; upon which the crew deserted to a man, rather than fight against their fellow-protestants; and Pennington was ordered by the court to put these ships into the hands of the French, to be employed as they thought fit. This occasioned a distrust of the king, a jealousy of the queen, and a general odium of the duke of Buckingham. Before the parliament had sat a fortnight at Oxford, whither it was removed on account of

the plague which raged in London, the king perceiving that the commons would grant no further supplies, till grievances were redressed, and that they were beginning to fall upon the conduct of the duke of Buckingham, he dissolved them in a hasty manner by commission, on August 12. But wanting money for the expedition against Spain, he raised it by a forced loan from his subjects, by letters under his privy-seal, which increased the popular discontents. On Feb. 2, 1626, the king was crowned. The new parliament met on the 6th, and was opened by a speech from the lord-keeper Coventry. Care had been taken to have the leading members against the court made sheriffs, that they might not be chosen in this. However, this parliament proved no more favourable to the king's designs than the former; they made greater complaints against the public grievances. The king sent for both houses to Whitehall, and severely reprimanded the commons, both by himself and the lord-keeper, complaining of their animosity against the duke, of the scantiness of the supply, and the manner of granting it; and in the end said, 'Remember, that parliaments are altogether 'in my power, for their calling, sitting, and dissolution; 'therefore as I find the fruits of them good or evil, they are 'to continue, or not to be.' This did not intimidate the commons, who being returned to their house, drew up a remonstrance, and presented it to the king, to justify their proceedings, and then went on with their articles against the duke, who, while under the impeachment, procured himself to be chosen chancellor of Cambridge, notwithstanding one of the articles against him was his engrossing a plurality of offices. The commons took great offence at this, but the king supported his election. The commons drew up a remonstrance against the duke, as the principal cause of all the grievances in the kingdom, and against tonnage and poundage, which had been levied by the king ever since his accession, though it was never understood to be payable without a special act of parliament in every new reign. But the parliament was dissolved by commission, June 15, before this remonstrance could be presented, and the king ordered all such as had copies of it to burn them. The duke remained in the king's favour till he was stabbed, when he was going to embark on board the fleet, of which he was commander in chief, as well as of the land forces. There was nothing but continual struggles between the king, who wanted to assume to himself the absolute power of disposing of his subjects' property, and leaving their grievances unredressed; and the parliament, who were willing to grant the king the necessary supplies, provided their grievances were redressed, and the rightful privileges of the subjects secured; which at last produced a civil war. On January 3, 1641-2, he sent his attorney-general to the house of peers, to accuse, in his name, of high treason, the lord Kimbolton, and five members of the house of commons, and persons were sent to seal up their papers, &c. and the king having sent a sergeant at arms to the house of commons to demand them, came himself the next day, attended by a number of armed men, as if with a design to seize them. Leaving his guard at the door, he entered the house, and taking the speaker's chair, made a speech to them on what he was come about; but looking round, and finding the accused persons not there, (for they had slipped away just before,) he told the house, he expected they should send them to him as soon as they returned; and then departed, the members crying out, Privilege! Privilege! The king soon after this removed with his family to Hampton-court, from thence to Windsor, and at last to York. Two days after his departure, he sent a message to both houses, telling them he would wave his proceedings against the six members, and be as careful of their

privileges as of his own life and crown. Two days after that, he sent another to the same effect; and on February 2, offered a general pardon: but all was to no purpose, the wound was too deep to be healed; the commons made a large declaration against the late action, impeached the attorney-general for what he had done, and committed him to prison. Moreover they set a guard about the Tower, sent Sir John Hotham to take possession of Hull, where was a great magazine of arms and ammunition, and ordered him to keep it for the parliament, understanding the king had a design to secure it for himself. On May 20, the commons voted, 1. That it appeared that the king, seduced by wicked counsels, intends to make war against the parliament. 2. That whensoever the king makes war upon the parliament, it is a breach of the trust reposed in him by his people, contrary to his oath, and tending to the dissolution of the government. 3. That whosoever shall serve or assist him in such wars, are traitors by the fundamental laws of the kingdom. On June 10, the two houses published proposals for borrowing money and plate for the defence of the kingdom. On the 15th, the king granted several commissions of array for levying troops; and the parliament drew up a declaration against them. On July 12, the commons voted, and with them the lords agreed, that an army should be raised, and the command given to R. Devereux, earl of Essex. And on August 22, the king in a solemn manner set up his standard at Nottingham, having before, by proclamation, commanded all men, who could bear arms, to repair to it the said day. On October 23, a great battle was fought between the two armies at Edgehill, in Warwickshire. Both sides claimed the victory; the number of slain on the field of battle was about 5000. The year 1643 began with a treaty for peace, which was held at Oxford, between the king and commissioners from the parliament; but it broke off on April 15, without success. On June 18, there was a fight in Chaldgrave field, in which the famous Mr. Hampden, a great leader in the parliament, was slain. On July 5, was fought the famous battle of Lansdown, in which, though the marquis of Hartford, who commanded for the king, lost almost all his horse, yet Sir William Waller was at last compelled to quit the field. But Sir William met with a worse fate on the 13th, when at Roundway Down, in Wiltshire, he was entirely defeated, 5 or 600 of his men slain, and 900 made prisoners. The king summoned such lords and commons as had deserted the parliament at Westminster, to meet as a parliament at Oxford. Accordingly they assembled January 22, 1643-4, and sat till April 16, following, when they were prorogued to October, but never met again. They did little of moment, except helping the king to money, which was the chief end for which they were called together. The king visibly gained ground of the parliament last year, and therefore the two houses thought it necessary to call in the Scots to their aid. A treaty was concluded, in pursuance of which the Scots army entered England, about the time the Oxford parliament met; it consisted of 18,000 foot, and 3000 horse, under the command of the earl of Leven, and passed the Tyne on Feb. 28, at some distance from Newcastle. On July 2, an obstinate and bloody battle was fought at Marston-Moor, in which prince Rupert was entirely routed, and the parliamentarians got a complete victory, which was owing in a great measure to Cromwell's valour and good conduct. York now surrendered to the parliament generals on honourable terms. On June 14, 1645, was fought the famous battle of Naseby in Northamptonshire, which decided the quarrel between the king and the parliament, wherein the parliament's forces gained a complete victory. The king lost a great number of officers and gentlemen of distinction, most of his

foot were made prisoners, all his cannon and baggage taken, with 8000 arms, and other rich booty; among which was also the king's cabinet, with his most secret papers, and letters between him and his queen; which shewed how contrary his counsels with her were to those he declared to the kingdom. After this signal victory, nothing could stand before the parliament's forces. On Feb. 18, 1645-6, Fairfax defeated lord Hopton at Torrington, and on March 15, he capitulated, his whole army to be disbanded in six days, and all the horses and arms to be delivered up to Fairfax; who by the surrender of Exeter, April 6, 1646, completed the reduction of the west to the power of the parliament. Upon Fairfax's approach to lay siege to Oxford, his majesty made his escape from thence, and threw himself into the hands of the Scots army. Oxford surrendered June 22, and the few remaining garrisons soon after. And thus the whole kingdom was subjected to the obedience of the two houses. And now the parliament consulted how to get the king out of the hands of the Scots, and to send them back into their own country. At last it was agreed that they should have 400,000*l.* for the arrears due to them, one moiety to be paid before their going home, and the other at stated times. And so, after several debates about the disposal of the king's person, the Scots having received the 200,000*l.* on January 30, 1646-7, delivered him up to the commons of the parliament of England, who were sent down to Newcastle to receive him. The same day their army began to march for Scotland, the king was conducted to Holmby-house, in Northamptonshire, where he arrived Feb. 16. The parliament and army quarrelled; and the council of agitators, consisting of deputies from each regiment, sent Cornet Joice with a detachment of fifty horse, to take the king from the parliament's commissioners at Holmby, and bring him to the army; which he resolutely effected on June 4, 1647. And now the army overruled the parliament. August 24, the king was conducted to Hampton-court. A treaty was set on foot for the restoration of the king, but on Jan. 3, 1647-8, the house (being still under the influence of the army) resolved, That no more addresses should be made to the king, no messages received from him; and to this the lords some days after agreed, the army promising to adhere to the parliament against the king. In the beginning of the year 1648, there were several risings in favour of the king: the Welsh under major-general Langhorn, had seized several places, and were 8000 strong, but were defeated by colonel Horton, sent before Oliver Cromwell; who arriving soon after, put an end to the commotions in Wales. In the mean time, general Fairfax defeated those who had risen in Kent. The Scots army under the duke of Hamilton, amounting to near 20,000, entered England in July, and were joined by about 5000 English, under Sir Marmaduke Langdale. Cromwell, after having finished his work in Wales, marched with all expedition to join Lambert in the north; and Aug. 17, near Preston, in Lancashire, totally routed and dispersed this great army, the duke, in his flight being taken prisoner. Cromwell then marched directly into Scotland, and arriving at Edinburgh, he divested the Hamiltonian party of their authority. At the beginning of these troubles, the presbyterian party, in the house, in the city, and other places, began to resume their courage. Several petitions were presented for a personal treaty with the king; and when the army was removed from London into different parts of the kingdom, the secluded members and others who had absented themselves, having returned to their seats, the votes of no more addresses were repealed, and it was resolved to enter into a personal treaty with the king; that Newport in the Isle of Wight should be the place of treaty; and that his majesty should be there with honour,

freedom, and safety; and five lords and ten commoners were nominated commissioners for this treaty; but the army was resolved to break off the treaty by force, and colonel Ewer, on Nov. 18, presented to the commons a remonstrance, wherein they desired, That the treaty might be laid aside, and that the king might come no more into the government, but be brought to justice, as the capital cause of all the evils in the kingdom, and of so much blood being shed. On Nov. 21, Cromwell recalled colonel Hammond from the Isle of Wight, and sent colonel Ewer to take charge of the king's person, who kept him in strict custody. On Nov. 30, his majesty was brought over to Hurst castle in Hampshire. On Dec. 4, the commons resumed the debates on the king's concessions, and voted, that the said concessions were sufficient grounds for settling the peace of the kingdom; and then adjourned to Wednesday. On which day some regiments of horse and foot having possessed themselves of all the avenues to the parliament-house, seized on forty-one members as they offered to go in, and the next day denied entrance to near one hundred more. An ordinance being voted in the house of commons, was carried up to the house of lords for their concurrence, though the commons declared, at the same time, that they, being representatives of the people, had a right to enact a law, though the consent of the king, and the house of peers, be not had thereto. They made an ordinance for erecting a high court of justice, for trying the king, who was brought from Windsor to St. James's on the 19th. The next day the trial began, the court sitting in Westminster-hall, and having chosen sergeant Bradshaw for their president. The substance of the charge was, That the king had endeavoured to set up a tyrannical power, and to that end had raised and maintained a cruel war against the parliament. The king behaved with dignity, making no other answer but denying the authority of the court. The same he did on the 22d and 23d. At last, being brought before them a fourth time, on January 27, he earnestly desired, before sentence, to be heard before the lords and commons; but his request was not granted. And so still persisting in disowning the jurisdiction of the court, and consequently in his refusal to answer to the charge, his silence was taken for a confession, and sentence of death was passed upon him: pursuant to which he was, on January 30, beheaded on a scaffold erected in the street near the windows of the Banqueting house at Whitehall, shewing as great a firmness, resolution, and resignation to the last, as he had done in all his sufferings. The day before his execution, he was permitted to see his children, the princess Elizabeth, and the duke of Gloucester, the only ones then in England. His corpse was carried to Windsor, and privately interred in St. George's chapel.

CHARLES II. was the son of king Charles I. and born May 29, 1630. On July 3, 1646, he went from Jersey into France, and resided abroad till May 1660, when he arrived at Whitehall. The king, upon forming his council, took in some that had been deeply enough engaged against his father, but afterwards promoted his restoration, as Denzel Hollis, afterwards lord Hollis, the earl of Manchester, Sir Anthony Ashley Cooper, and others. Mr. Baxter and Mr. Calamy were appointed his chaplains in ordinary. Sir Ed. Hyde, afterwards earl of Clarendon, was his lord chancellor and prime minister. The assembly which restored the king had been summoned by a commonwealth writ, in the name of the keepers of the liberties of England. It was however called a parliament till his arrival, and then had only the name of a convention; however, two days after the king went to the house, and gave his assent to an act for changing the convention into a parliament. August 29, his majesty

gave his assent to the act of indemnity, with some exceptions. The commons, soon after, voted 1,200,000*l.* for the ordinary expences of the government. On September 13, died of the small pox, Henry duke of Gloucester, his majesty's youngest brother. The duke of York married Anne, eldest daughter of Chancellor Hyde, earl of Clarendon, to whom he had been contracted at Breda. This parliament, which the king would have called the healing parliament, was dissolved Dec. 29, after passing several acts, and among the rest, one for erecting a post-office. The Royal Society was founded this year, 1660, by the king and letters patent. The king was crowned on April 24. A new parliament was summoned to meet on May 8, which continued almost 18 years, and was afterwards called the pensionary parliament. In May 1662 the marriage between the king and Catharine, princess of Portugal, was solemnized. The sale of Dunkirk, this year, to the French king, for five millions of livres, made a great noise in England, and was much reflected on. On March 2, 1664-5, war was proclaimed against the States-general. In this session of parliament, the clergy gave up the right of taxing themselves in convocation, and have ever since been taxed by the parliament in common with other subjects; and from this time the clergy have voted at elections for members of parliament. On June 3, 1665, the duke of York beat Opdam the Dutch admiral. The plague broke out in London in May, and before the end of the year, when it ceased, swept off 68,596 of the inhabitants. In January 1665-6, the French king declared war against England. The English fleet put to sea under the command of prince Rupert and the duke of Albemarle, towards the middle of May, and there was soon a most bloody fight with admiral Ruyter, in which the English were worsted. There was another furious engagement in July, when the Dutch were beaten. On Sept. 2, about one in the morning, a terrible fire broke out in the city of London, which continuing three days, laid the greatest part of the city in ashes, consuming 89 churches, the city gates, Guildhall, with many other public structures, and 13,200 dwelling houses; and the ruins of the city were 436 acres. In October 1667, the king laid the first stone of the Royal Exchange, which was built in the room of the old one, erected by Sir Thomas Gresham. In January 1667, was concluded the famous triple alliance between England, Holland, and Sweden, which was designed to check the projects of Lewis XIV. of France, who had already invaded the Spanish Netherlands. This was almost the only step taken by king Charles for the interest of England and of Europe during his whole reign; and indeed, it seems, that his design in it was only to amuse the public, and that there was a secret understanding between him and Lewis at the same time. In April, 1670, a severe act was passed against the nonconformists. The king established a secret council, consisting of the five following persons; Clifford, Arlington, Buckingham, Ashley Cooper, and Lauderdale. This council was nick-named the Cabal, from the initial letters of their names; and they truly deserved that name, as they artfully promoted all the king's measures, how contrary soever to the interest of England and the good of all Europe. In January 1670-1, was passed the famous Coventry act against maiming or disfiguring, making it death. On Feb. the 2d, the king sent a message to hasten the money-bills. Lord Lucas made a bold speech in the house of lords against the money-bills. A difference happened about the same time between the two houses, upon the lords' right of altering money-bills. In the midst of this dispute the king came to the house of peers, and prorogued the parliament. A powerful league was now formed against Holland by France, England, the elector of Cologne,

and the bishop of Munster. The king, though he had lately two millions and a half from the parliament, and 700,000*l.* from the French king, was so profuse, that he still wanted money, which he would fain raise without applying to the parliament. Upon this the Cabal advised him to shut up the Exchequer, which he actually did, and it continued shut up for a year and some months, to the great distress and ruin of many families. On March 15, the king published his declaration for liberty of conscience, suspending the execution of all penal laws against the nonconformists. On the 17th, the king declared war against the States-general; and the French king, and the other allies, soon after. The parliament met on February 4, 1672-3, and it soon appeared that the country party, or that of the people, was become more powerful in the house of commons than the court party. They vigorously addressed the king against this declaration for liberty of conscience, as it was claiming a dispensing power; and both houses joined in addresses against the dangers that threatened the nation from popery. The king finding the commons so fully bent not to finish the money-bills till their grievances were redressed, recalled his declaration. On April 16, 1677, the king, among other acts, gave his assent to one for taking away the writ *de hæretico comburendo*. On August 11, 1678, the separate peace with Holland was signed, and some months after with the rest of the allies. March 21, 1680-1, the parliament met, and the first thing they did was to order their votes to be printed, which practice they have continued ever since. But the king finding this parliament not inclined to countenance his favourite schemes, came suddenly to the house of lords and dissolved it, after one short session of but seven days. The year 1684 was almost wholly taken up with prosecutions of persons for speaking ill of the king, the duke of York, and the government; some were fined, and in large sums, and others pilloried. Sir George Jefferies, a man without honour or conscience, had been made lord justice of the King's Bench, and other alterations had been made among the judges; and the sheriffs of London being now named by the king, impannelled such juries as were sure to find for the court. The project of the surrender of Chartres was completed this year. On February 6, 1684-5, the king died (or was poisoned) in his 55th year, and near 25 years after his restoration. He had no children by his queen, but several by his mistresses.

Its market is held on Wednesdays and Saturdays; and its three annual fairs, on Feb. 24, July 5, and Oct. 10, each lasting a week, are the most noted in England, especially for Irish linens. The main streets have a peculiarity of construction; they are hewn out in the rock to a considerable depth, and the houses have, elevated in front, a sort of covered porticos, which are called Rows, and afford a sheltered way for foot passengers. Here are manufactures of worsted and cotton stockings, and of carpets; also silk mills, and potteries for brown ware; and near the town are large iron founderies, which are supplied with ore and coal dug in the vicinity. Large quantities of lead are sent hence by the canal to the Trent, which it joins below Gainsborough; and the country round produces great quantities of camomile. CHINA, an extensive empire of Asia, bounded on the E. by the ocean, and the N. by a great wall about 1500 miles in length, which separates it from Tartary; on the W. by high mountains and deserts, and on the S. by the ocean, and the kingdoms of Tonquin, Laos, and Birmah. It is included between 98 and 123 degrees of E. longitude, and between 21 and 42 of N. latitude. It is about 1330 miles in length from N. to S. and 1030 in breadth from E. to W. and is divided into 15 provinces, which contain 4402 walled cities, of which 2045 belong to the civil class, and 2357 to the military. An account, procured by Sir George Staunton, in 1793, makes the population amount to the

incredible number of 333 millions. Here are several large lakes; the principal of which are the Po-yang, in Kiang-si, 250 miles in circuit; the Tong-ting, in Hou-quang, above 200 miles in circuit; the Tai, part of which extends into Kiang-nan; and the Hong-tse, and Kao-yeou, in the province of Kiang-nan. There are several rivers, and where these are wanting there are artificial canals, for the more ready communication and trading from one part to another; for they are all made navigable for large barks. It is generally a plain champaign country, and scarcely an inch of ground remains unoccupied; for the hills are cut into several stages or stories, from the bottom to the top, that the rain may water them all pretty equally, and render them more fruitful. Even the mountains are cultivated and covered with trees; and there are mines of iron, tin, copper, quicksilver, gold, and silver. There are corn and pulse of all sorts, especially rice; and a great number of simples, and several trees and fruits proper to the country; in particular, one tree produces peas, very little different from those of Europe; another bears a kind of gum, which makes excellent varnish; a third bears white berries of the size of a hazel-nut, the pulp of which is a sort of tallow, manufactured by the inhabitants into candles; and a fourth, called the white-wax tree, produces white shining wax, of much greater value than the common wax. The Bamboo cane grows to the height of an ordinary tree; and though hollow within, the wood is very hard, and proper for many uses, such as pipes to convey water, boxes, baskets, and for the making of paper, after it is reduced into a sort of paste. It is now well known to all Europe, that this is the only country from whence all sorts of teas are imported. The complexion of the Chinese is a sort of tawny, and they have large foreheads, small eyes, short noses, large ears, long beards, and black hair; and those are thought to be most handsome who are most bulky. The women affect a great deal of modesty, and are remarkable for their little feet. The men endeavour to make as pompous an appearance as possible, when they go abroad; and yet their houses are but mean and low, consisting only of a ground floor. They are inclined to all sorts of learning, particularly to arts and sciences. The government of this empire is absolute, and the emperor has the privilege of naming his successor; but the chief mandarin has permission to remind him of his faults. He looks upon his subjects as his children, and pretends to govern them with a fatherly affection. There is no country in the world where the inhabitants are so ceremonious as here. It is certain that their empire is very ancient; but they pretend that it has existed many thousand years before our era of Noah's flood. However, it is generally allowed to have continued, without interruption, from the year 2500 before Christ, though they have had twenty-two different families on the throne. The last family, now reigning, is that of the Tartars, who conquered China in 1640. The religion is Paganism, and the principal pagodas are dedicated to their god Fo. They allow polygamy, and keep their wives pretty close. Their writing is very particular: for every letter is a word, and consequently they have as many letters or characters, as words, in their language. All their cities and towns are so much alike, that those that know one are acquainted with all. Pekin is the capital of the whole empire. The annual revenues of the crown, according to Sir George Staunton, are said to be 66,000,000 l. sterl. and the army in the pay of China, including Tartars, amount to 1,000,000 infantry, and 800,000 cavalry. The Chinese pretend to have a great veneration for their ancestors; and some keep images of them in their houses, to which they pay a sort of devotion. They have laws which regulate the civilities and ceremonious salutations they pay each other, for

which reason they always appear to be extremely good natured; and yet there is but little dependence on their friendship, for they are as deceitful, and as great hypocrites, as any people in the world.

It is understood of the collective body of Christians through the whole world, who profess to believe in Christ, and acknowledge him to be the Saviour of mankind. This is what ancient writers called the Catholic or universal Church; and agrees with the apostle's account of one, in Col. i. 18. 2. It is applied to any particular congregation of Christians, who, at one time, and one and the same place, associate together, and concur in the participation of all the institutions of Jesus Christ, with their proper pastors and ministers. 3. It is also applied to any particular sect or party of Christians, distinguished by particular doctrines and ceremonies; as, the *Romish Church*, the *Greek Church*, the *Church of England*, the *Reformed Churches*, and the like. 4. It is sometimes used to denote the body of ecclesiastics, or clergy; in which sense *Church* is opposed to the *State*. 5. It is likewise taken for the place where a particular congregation or society of Christians assemble for the celebration of divine service. In this sense *Churches* are variously denominated, according to the rank, degree, discipline, &c. as the metropolitan, patriarchal, cathedral, parochial, collegiate, &c. Sometimes the word *Church* is considered in a more extensive sense, and divided into several branches; as, the *Church militant*, is the assembly of the faithful on earth; the *Church triumphant*, that of the faithful already in glory; to which the Papists add the *Church patient*, which, according to their doctrine, is that of the faithful in purgatory. **SYNON.** *Church* and *temple* signify an edifice set apart for the public service of religion; but that of *temple* is a more pompous expression, and less in use than *Church*. With respect to the Pagan religion, we frequently use the word *temple*; as, the *temple* of Apollo: but with relation to our own, seldom; St. Paul's *Church*.

GREAT BRITAIN.

In England, the current species of gold coin are the guinea, sovereign, half guinea, half sovereign, and seven shilling piece. The old quarter guinea, jacobus, laureat, angel, and rose-noble, are now seldom met with, having been mostly converted into guineas, chiefly during the reigns of Charles II. and James II.

The silver coins are the crown, half crown, shilling, and sixpence. The penny, two-penny, three-penny, and groat pieces, in silver, are now rarely seen. The copper coins are the two-penny piece, penny, half-penny, and farthing. In Scotland, by the articles of Union, it is appointed, that all the coins be reduced to the English, and the same accounts to be observed throughout the whole island. In Ireland the coins are the same as in England, except that the English shilling passes for 26 halfpence.

FRANCE.

In France, the gold coin is the Louis or Napoleon d'or, with its divisions, which are the half and quarter; and its multiples, which are the double and quadruple Louis d'ors.

SPAIN.

In Spain the gold coin is the pistole, above which is the double pistole, and piece of four pistoles, and under it the half pistole; to which must be added, the castilians of gold. The silver coins are the piastre, or piece of eight rials, and its diminutions; as also, the simple rial, with its diminutions. The copper coins are ochavos, or octavos, which are of two kinds, the one equal to four maravedies, and ordinarily called quartil: the other double this, and called double quartil; and lastly, the maravedie. In Spain they have new money and old; the old, current at Seville, Cadiz, Andalusia, &c. is worth 25 per cent. more than the new, current at Madrid, Bilbao, St. Sebastian, &c. This difference is owing to their king Charles II. who, to prevent the exportation of money, raised it 25 per cent.; however, several provinces retained the ancient value.

GERMANY, &c.

The German and Italian coins are so numerous and various, every prince and state having a coinage of their own, that it would be a difficult as well as useless task, to reduce them to any standard, many of them being current only in the place where they were coined; and as the knowledge of them can be of no service to the reader, unless he happens to travel into those countries, we shall pass on to

The orbits of comets approaching near to a right line, in some parts thereof they go so near the sun, that, according to Sir Isaac Newton's computation, the sun's heat, in that remarkable one of 1680, was to his heat with us as twenty-eight thousand to one; and that the heat of the body of the comet was near two thousand times as great as that of red-hot iron. To this let it be added, from the same great author, that these bodies are so far from being such tremendous objects as they are esteemed to be by the vulgar, and falsely pretended to be by atheists; that their atmospheres being dilated, rarefied, and diffused through the celestial regions, may be attracted down to the planets, become mingled with their atmospheres, and by that means supply the deficiencies which would otherwise, by continual exhausting, affect this and other planets; so that their revolutions, instead of being looked on as the harbingers of terror and calamity, should rather be esteemed as friendly and benevolent visits, wherein they bestow such presents to every planet they pass by as are requisite to prevent its decay, and supply its inhabitants with such things as are necessary to their existence.

CONSTABLE, *s.* [it is supposed from *comes stabuli*, Lat. master of the horse] an officer in various manners. *Lord High Constable* was anciently an officer of the crown, both of England and France, whose authority was so very extensive, that the office has long since been laid aside in both kingdoms, except on particular occasions, as the king's coronation. The function of the *Constable* of England consisted in the care of the common peace of the land, in deeds of arms, and in matters of war. The first *Constable* was created by the Conqueror; the office continued hereditary till the 13th of Henry VIII. when it was laid aside, as being so powerful as to become troublesome to the king. From the *Lord High Constable* derived those inferior officers, since called the *Constables* of hundreds and franchises, ordained in the 13th of Edward I. by the statute of Winchester, for the conservation of the peace, and view of armour, which appointed that two constables should be chosen in every hundred. These are what we now call *High Constables*; and under these it was found necessary to appoint others in every town called *Petty Constables*. We

have also constables denominated from particular places; as *Constable* of the Tower, of Dover castle, of Windsor castle, of the castle of Caernarvon, and many other castles in Wales, whose office is the same with that of the *Castellans*, or governors of castles.

Through the Upper Lake the Rhine flows, and then enters the Zeller See. Like all the lakes in Switzerland, this is deeper in summer than in winter, owing to the melting of the snows in the adjacent mountains.

CONSTANCE, a city of Suabia, pleasantly seated on the Rhine, between the Upper and Lower Lakes of Constance. It has magnificent public buildings, and once flourished in commerce; but now scarcely contains 4000 inhabitants. Constance is famous for a council, in 1514, which caused John Huss, and Jerome of Prague, to be burnt; and likewise condemned the doctrine of Wickliffe, and ordered his bones to be burned, 40 years after he was dead. It was also this Council that gave rise to the infamous tenet, that faith was not to be kept with heretics! In 1787, about 300 emigrants from Geneva were settled here by the emperor Joseph II. who granted them the secularised convent of the Dominicans for a manufacture of printed linens. The French took possession of this city in 1796; and, in 1805, it was ceded by the treaty of Presburgh to the Grand Duke of Baden. Lon. 9. 7. E. lat. 47. 38. N.

CONSTANTINOPLE, the ancient *Byzantium*, one of the largest and most celebrated cities of Europe, and capital of the Ottoman empire. It is pleasantly seated at the S. E. extremity of Romania, between the Black Sea and the Sea of Marmora, on a neck of land separated from from Natolia by a strait a mile in breadth. The grand signor's palace, called the Seraglio, is on the sea-side, surrounded by walls flanked with towers, and separated from the city by canals. It is 3 miles in circuit, consisting of a multitude of palaces, houses, and gardens. It contains, besides the public offices, and the apartments of the sultan and the women, 162 odas, or apartments for the Janissaries. Its principal entrance is of marble, and called Capi, that is, the Porte or Gate, whence the denomination of *Ottoman Porte* is given to the Turkish empire. Fronting the great gate of the seraglio, is the celebrated mosque of St. Sophia, built for a Christian church by the emperor Justinian, and capable of containing 100,000 persons conveniently, to which the grand signor goes in person every Friday. In the castle of the seven towers, to which an eighth has been added, situated near the sea of Marmora, state prisoners are confined. The bazars, or markets, are square buildings,

covered with domes, and supported by arcades. The number of houses in Constantinople must be prodigious, since 30,000 of them have been destroyed by fire in a day, without greatly changing the aspect of the city. The houses in general are crowded with inhabitants, and have a mean appearance, and the streets are narrow; even the palaces of the grandees have nothing very remarkable on their outside, but within they are decorated with splendid and costly ornaments. Here are reckoned 3770 streets and lanes, which are never clean, and the inhabitants are visited by the plague almost every year. The inhabitants are estimated at 520,000; of which about half are Turks; two-thirds of the other half Greeks and Armenians; and the rest Jews and Franks. The great square, near the mosque of the sultan Bajazet, is the place for public diversions, where the jugglers and mountebanks display their tricks. The street called Adrianople, is the longest and broadest in the city. The circumference of the city is 18 miles, and 24 with the suburbs included. The suburb called Pera is delightfully situated, and is the residence of foreign ambassadors, who, in common with all other foreigners, are prohibited from living in the city; neither is it safe to enter the walls on a visit, without the protection of a janissary. Constantinople is built in form of a triangle, and, as the ground rises gradually, there is a view of the whole town from the sea; in which the palaces, mosques, bagnios, and caravansaries, rising above the other houses, have a grand effect. The harbour is spacious and convenient. This city is 112 miles E. S. E. of Adrianople, and 700 S. E. of Vienna. Lat. 41. 1. N. lon. 28. 55. E.

From its vicinity to the sea, it is exposed to frequent storms, but exempted from hard frosts and great heats; and though it has abundance of rainy and foggy weather; the inhabitants are seldom troubled with agues or fevers. The spring shews itself in the buds and blossoms sooner than in the other parts of England; but the harvest is later, and the fruits have less flavour than in the midland counties. Here are some uncommon plants, and plenty of sea-herbs, as camphor, eringo, and ros solis, &c. It is well situated for the herring and pilchard fisheries, and the inhabitants fully avail themselves of their local advantages. It derives, however, its chief importance from its minerals; which consist of tin and copper. With the metalline ores are found large quantities of mundic and arsenic; many sorts of stones are likewise found here, particularly moorstones, used both in buildings and for mill-stones, and which, when polished, appear splendid and beautiful; and in the cavernous parts of the rocks are found transparent crystals, called Cornish diamonds, which are very brilliant when well polished. The number of men, women, and children, employed in raising the tin ore, washing, stamping, and carrying, is stated to amount to 16,000. The principal rivers are the Tamar, Camel, and Fale. It sends one member to parliament, alternately with Nairnshire; and is divided into five parishes, containing about 6200 inhabitants. Its capital, of the same name, has a manufacture of hempen cloth, which employs about 200 persons, and a considerable coasting trade in corn, thread, yarn, fish, and skins. It contains a population of about 2600 souls, and is situated at or near the entrance of the Frith of Cromarty, the most safe, extensive, and commodious bay, or harbour of Scotland, and one of the finest in Europe, or the world. This truly excellent, but much neglected harbour, the *Portus Salutis* of the Romans, is about 22 miles in length, and in some parts 4 in breadth; the entrance is narrow and bold, being formed by two huge lofty rocks, which project into the sea till they approach within a mile of each other, and therefore defend this fine bay completely from winds and storms. These rocky promontories, or islands, thus approaching each other, and having also a similar appearance, are called by the natives, *The Sooters of Cromarty*, which, in the Scottish language, means wooers, or lovers. Such is the vast extent of sea-room in this bay, that almost the whole British navy might ride with safety within it; and the state of the shore, or anchorage ground, on both sides, for several miles up, is so favourable and smooth, that were a vessel driven from her cables and cast ashore, little or no damage would be incurred. CROMWELL, *Oliver*, was the son of Mr. Robert Cromwell, who was the second son of Sir Henry Cromwell, of Hinchbrooke, in the county of Huntingdon, by Elizabeth, daughter of Sir Richard Stewart, of the Isle of Ely, knight. He was born in the parish of St. John, in the ancient borough of Huntingdon, on April 24 or 25, in 1599, in the 41st year of the reign of Queen Elizabeth. He was sent to school under the care of Dr. Thomas Beard, master of the free-school at Huntingdon. He from thence removed to Sidney college in Cambridge, where he was admitted April 23, 1616, under the tuition of Mr. Richard Howlet, who, by a strict attention to his pupil's disposition, very quickly discovered, that he was less addicted to speculation than to action. His father dying, he returned home, where his conduct was far enough from being regular, insomuch that it gave his mother, who was a notable and prudent woman, much uneasiness. She was advised by some near relations to send him up to London, and to place him in Lincoln's inn, which she accordingly did, but without any extraordinary effects, since it only served to bring him acquainted with the vices of the town, by way of addition to those to which he had been addicted in the country. It does not at all appear that he applied himself to the study of the law, which was what his friends aimed at; on the contrary, he continued to pursue his pleasures, and gave himself up to wine, women, and play; in which last, though he was sometimes fortunate, yet, taking all his expenses together, they so much exceeded his income, that he quickly dissipated all that his father left him. But after a few years spent in this manner, he saw plainly the consequence of his follies, renounced them suddenly, and began to lead a very grave and sober life, and entered into a close friendship with several eminent divines, who looked upon his reformation as very extraordinary, and spoke of him as a man of sense and great abilities. As he was nearly related to Mr. Hampden of Buckinghamshire, to the Barringtons of Essex, and other considerable families, they interested themselves in his favour, and were very desirous of seeing him settled in the world; in order to which, a marriage was proposed, which soon after took effect. The lady he married was Elizabeth, daughter of Sir James Bouchier, of Essex, knight, a woman of spirit and parts, and being descended from an ancient family, did not want a considerable portion of pride. Mr. Cromwell soon after returned to his own country, and settled at Huntingdon, till the death of his uncle Sir Thomas Stuart, who left an estate of between 400l. and 500l. a year, induced him to remove into the Isle of Ely. It was about this time that he began to converse mostly with them that were then styled Puritans, and by degrees affected their notions with great warmth and violence. He was elected a member of the third parliament in the reign of Charles I. which met January 20, 1628, and was of the committee for religion, where he distinguished himself by his zeal against popery, and by complaining of Dr. Neile, then bishop of Winchester, licensing books which had a very dangerous tendency.

After the dissolution of that parliament, he returned again into the country, where he continued to express much concern for religion, to frequent silenced ministers, and to invite them often to lectures and sermons at his house, by which he again brought his affairs into a very indifferent situation; so that he judged it necessary to try what industry might do towards repairing these breaches, which led him to take a farm at St. Ive's, and this he kept about five years; though indeed, instead of repairing, it helped to run out the rest of his fortune. He had prayers in the morning and afternoon, and he gave public notice that he was ready to make restitution to any from whom he had won money at play; and he actually did return 30*l.* to Mr. Calton, from whom he won it several years before. When the earl of Bedford, and some other persons of high distinction, who had estates in Lincolnshire, were desirous of having the fens drained, Cromwell violently opposed it, which gave occasion to Mr. Hampden to recommend him to his friends in parliament as a person capable of conducting great things. He had the address to get himself chosen for Cambridge, a place in which he was not known, and was very zealous in promoting the remonstrance, carried November 14, 1641, which laid the basis of the civil war. In 1642, Mr. Cromwell raised a troop of horse, which he commanded, by virtue of a commission from the earl of Essex, and acted very vigorously, so that he was promoted to the rank of colonel, and had 1000 horse under his command, and was some time afterwards lieutenant-general of the horse. In the battle of Marston Moor, July 3, 1644, it was universally allowed that his cavalry had the greatest share in gaining the battle. In the winter, when the parliament sat, Cromwell and his friends carried what was then called the self-denying ordinance, that excluded the members of either house from having any commands in the army: however, Cromwell was at first occasionally, and at last absolutely exempted. Upon the introduction of the new model, as it was called, the chief command of the army was given to Sir Thomas Fairfax; and from being lieutenant-general of horse, Cromwell became lieutenant-general of the army, of which, while another had the title, he seems to have had the direction. In 1646, the earl of Essex died suddenly; and Cromwell turned his thoughts entirely to make the army the supreme power, which he accordingly effected, and turned out those members of the house who would not act by his direction. The circumstances connected with the beheading of the king, and other public transactions of that period, are well known. Cromwell had the command of the forces in Ireland, and the title of Lord Lieutenant was bestowed upon him; and by the month of June 1650; all Ireland was in a manner subdued, and that in so short a space as nine months. He left Ireton, his deputy there, and came over to England. On June 26, 1650, he was appointed general and commander in chief of all the forces of the commonwealth, and set out on his march against the Scots, who had received Charles II. On September 3, 1651, he totally defeated the king's forces at Worcester; he then came up to London, and was congratulated by the house of commons, the council of state, the lord mayor, &c. On the 19th of April, 1643, he called a council of officers, to debate about the government: while they were sitting, colonel Ingolby came and informed them, that the parliament had framed a bill to continue themselves till November 5, in the next year, proposing to fill up the house by new elections: whereupon the general marched directly to Westminster, with about 300 men, placed his soldiers about the house, entered first himself, and, after staying for some time talking to them, he ordered the soldiers to see the house clear of all members,

and having caused the doors to be locked up, went away to Whitehall. On December 16, the same year, Cromwell was invested in the court of Chancery in Westminster-hall, with great solemnity, with the title of Protector of the Commonwealth of England, Scotland, and Ireland, being then in the 54th year of his age. He applied himself immediately to the settling of public affairs, both foreign and domestic, and concluded a peace with the States of Holland, in which Denmark was included. He also made peace with Sweden; and France and Spain contended so earnestly for his friendship, that they made themselves ridiculous. As to domestic affairs, he filled the courts of Westminster with able judges, professed an unalterable resolution of maintaining liberty of conscience, and dismissed from their commands such officers as he could not confide in. He gave the command of all the forces in Scotland to general Monk, and sent his own son Henry to govern Ireland. By an ordinance dated the 12th of April, 1654, he united England and Scotland, fixing the number of representatives for the latter at thirty, and soon after he did the same by Ireland. He shewed a great regard to justice, in causing the brother of the ambassador from Portugal to be executed for murder. He called a parliament to meet on September 3, which was accordingly opened on that day, to which the Protector went in great state. He received the house of commons in the painted chamber, where he made them a very long speech. When they came to their house, after electing Mr. William Lenthall their speaker, they fell to debating whether the supreme legislative power of the kingdom should be in a single person or a parliament. This so alarmed the Protector, that on the 12th of the same month, he caused a guard to be set at the painted chamber, where he gave them a sharp reproof, and none were permitted to go into the house afterward before they had taken an oath to be faithful to the Protector and his government. The Protector finding this parliament would give him no money, and that they were about to take away his power, dissolved them. He restored to the city their militia. This year, 1655, there were some conspiracies, for which several persons suffered death, and the Protector from henceforth made no difficulty of supporting his authority, in any manner, and by any means. In the spring of this year he sent a powerful fleet under the command of admiral Penn, and a great body of land forces, commanded by general Venables, in hopes to make himself master of great part of the Spanish West Indies; and though they failed in their main design, yet they made themselves masters of Jamaica, and admiral Blake did great things in the Mediterranean: so that the Protector's reputation was very high abroad. Writs were issued out for the parliament to meet September 17, 1656, at which time they met accordingly; but there was a guard posted at the door of the house, who suffered none to enter till they had swallowed the oaths that were ready prepared for them; by which about 200 were excluded. In the spring of the year 1657, a kind of legislative government was brought upon the carpet, and it was agreed to offer Cromwell the title of king. Finding it disagreeable to his best friends, he told them he could not, with a good conscience, accept the title of king; but his highness resolved upon a new inauguration, which was accordingly, with great solemnity, performed, June 26, 1657, in Westminster-hall, with all the splendour of a coronation. On January 20, 1658, the commons met, as the other house also did, pursuant to the writs of summon issued by the Lord Protector; and all shew of force was withdrawn: but the two houses being at variance, the Protector dissolved them February 4, with great bitterness of speech, and deep sorrow of heart. This year Dunkirk, which was taken chiefly by the valour of the English, was delivered

into the hands of Lockhart, his ambassador. His favourite daughter, Mrs. Cleypole, was about this time taken ill, and died Aug. 6. He was from that time wholly altered, grew daily more reserved and suspicious, not indeed without reason; for he found a general discontent prevail through the nation. At Hampton-court he fell into a kind of slow fever, which soon degenerated into a tertian ague. Being removed to London, he became much worse, grew first lethargic, then delirious, from which he recovered a little, but was not capable of giving any distinct directions about public affairs. He died Sept. 3, 1658, in the 60th year of his age. A very pompous funeral was ordered at the public expence, and performed from Somerset-house with a splendour superior to any that has been bestowed upon crowned heads. The Protector had several children, of whom six survived to be men and women, viz. two sons and four daughters. 1. Richard Cromwell, born October, 1626, and died July 13, 1712, at Cheshunt in Hertfordshire; 2. Henry Cromwell, born Jan. 20, 1627, died March 25, 1674. 3. Bridget, who first married commissary-general Ireton, and after his decease lieutenant-general Fleetwood. 4. Frances, his youngest daughter, was twice married; first to Mr. Robert Rich, grandson to the earl of Warwick, Nov. 11, 1657, who died the 16th of February following. She afterwards married Sir John Russell, of Chippenham in Cambridgeshire; by whom she left several children, and lived to a great age.

D Is the fourth letter of the alphabet, and a consonant, differing but little in sound from T. In the Roman, Saxon, and our alphabet, it is of the same shape, and seems formed from the Delta of the Greeks. It is pronounced by applying the tip of the tongue to the fore part of the palate, and then separating them by a gentle breathing, the lips being open at the same time. The sound of D in the English is uniform, and is never mute, except in the words *Wednesday* and *handkerchief*, and scarcely so in them. D, as a numeral, denotes 500; and with a dash over it thus *D̄*, 5000. In Abbreviations, it has various significations; thus D. stands for *doctor*, as M. D. for *doctor of Medicine*; D. T. *doctor of Theology*; D. D. *doctor of Divinity*; LL. D. *doctor of Laws*. D is also a note or key in music.

The kingdom of Denmark was formerly limited and elective, but in 1660 it was rendered absolute and hereditary even to the daughters, partly by consent, and partly by force; at which time the nobility lost most of their privileges.
